Coach supplement 2026

TEACHING GUIDES / PLANNING / SOURCE REFERENCES

A practical companion to the original coaching library. This supplement adds 22 Coach Kyle teaching guides, five short written drills, and 13 source-video reference cards, together with new planning and family orientation material.

PRINT AND FILE

This PDF contains 66 pages / 33 double-sided sheets. Append it after the eight-page games addendum. Its printed BINDER numbers run from 217 to 282; the original 208-page binder and games pages 209-216 stay unchanged.

Use Letter paper, Actual Size / 100%, double-sided, flipping on the long edge. The wider punch margin alternates. Kyle guides use two-page spreads; the Facebook section uses shorter drills and compact reference cards.

READ THE TEACHING RELATIONSHIP

Written steps, repetitions, age adaptations and boundaries are coaching progressions. They are not transcripts of every linked clip. A related video can illustrate a component or variant; teach the stated progression and use the source note to identify the difference.

Age bands organize practice choices. Readiness, controlled receiving, partner trust and a reliable stop-and-release response determine what an athlete should do next. Use the simpler option when those checks are not met.

FIND EXISTING INSTRUCTION

The updated master index points to all 72 original moves, 37 games, 90 practices, planning forms and standalone resources. K and V identifiers match the website. Video reference cards name the original written guide IDs for fuller instruction.

VERSION AND SOURCE SCOPE

Prepared October 13, 2026 from the current review content. Original downloads and ZIP archives remain unchanged. Publisher titles, links and prior selected-frame checks have different limits; no full viewing of every clip is claimed.

K19 is a Roll-Out Foundation, distinct from the linked head-spin variation. Full teaching notes remain on its guide. Current club logistics and program placement should be confirmed with the club.

Season pathway

PLAN / REPEAT / ADAPT

Use these phases to choose among the existing 30 practices for each age group. Practice numbers suggest an order, not a weekly calendar or a deadline. Revisit useful sessions and choose each athlete's challenge by experience and readiness.

WHEN TO REPEAT

Repeat when an athlete still needs help with the main task. Use the plan's easier option, give one useful cue, and look for the same success in another short round. Keep a familiar activity in the next session; repeating a phase is part of learning.

WHEN TO ADVANCE

Use the plan's Notice success prompt and each move's prerequisites. Before adding a new choice or resistance, check that the athlete can do the current task with control, stop and release, and work comfortably with the selected partner. Different tasks can progress at different speeds. For ages 4-6, progress means comfortable movement and willing participation; it does not lead automatically to contact wrestling.

AFTER A MISSED PRACTICE

After an absence, ask what the athlete last practiced and review the next plan's Check first section. Revisit the missing foundation in a short coach-led station, then offer a familiar version of the group's task. Do not compress several new techniques into one catch-up session.

WELCOMING A LATE JOINER

Welcome a new wrestler into an appropriate age group, then use its first six plans to check room routines, movement and partner readiness. An experienced newcomer can demonstrate familiar tasks; a beginner can work on earlier foundations while sharing the group's warm-up, game and reflection. Use the Coach toolkit's private readiness record for the next teaching action, not a combined score or ranking.

This pathway organizes the existing 90 practice plans. Phases are teaching blocks, not promised calendar dates or automatic promotion by age. The original blueprint and toolkit remain companions.

Ages 4-6 pathway

EXISTING PRACTICES 01-30 / FIVE FLEXIBLE PHASES

Discover wrestling movement through play, personal space and choices. All five phases keep solo and supported options available; children can repeat a favorite without completing every activity.

FIND SPACE AND EXPLORE MOVEMENT | PRACTICES 01-06

Start with a welcoming room, a shared stop signal and comfortable ways to move between clear spaces.

Focus: Find personal space and respond to a familiar stop cue. / Explore stance, short steps and a small level change. / Try hands-and-knees base and comfortable animal movement.

TURN, RISE AND MIRROR | PRACTICES 07-12

Revisit movement choices, introduce a solo stand-up, and begin responding to another child's ideas without contact.

Focus: Look before turning or taking controlled steps. / Explore the solo outside-leg stand-up and turn to face. / Celebrate favorite movements and mirror with room between partners.

SHARE TURNS AND TRY SOLO MAT SKILLS | PRACTICES 13-18

Mix shared choices with solo sprawl and sit-out practice. Keep pauses and independent alternatives part of every activity.

Focus: Offer a turn and respect a partner's pause. / Roll a ball gently and help choose a movement route. / Try a slow solo sprawl or sit-out, then reset separately.

READ CUES AND CHOOSE A ROUTE | PRACTICES 19-24

Use stories, visible signals and open paths to revisit familiar movements while children make more of the choices.

Focus: Share story ideas and celebrate helpful, no-touch cooperation. / Notice a cue and find an open route. / Revisit level-change steps and gentle movement around a curve.

CHOOSE, CONNECT AND CELEBRATE | PRACTICES 25-30

Let children choose comfortable activities, connect familiar solo movements with pauses, and show what they enjoyed learning.

Focus: Choose space, a pause or adult help when needed. / Connect familiar base, sit-out and stand-up movements at an easy pace. / Invite ideas, revisit favorite games and celebrate each child's participation.

See this age group in the master index for each practice title and original binder page. Repeat or simplify a block whenever the readiness checks call for it.

Ages 7-10 pathway

EXISTING PRACTICES 01-30 / FIVE FLEXIBLE PHASES

Build a small, connected set of wrestling skills. Rehearse each new task cooperatively before using the plan's harder option; a missed session or a birthday does not determine the next skill.

BUILD MOVEMENT AND PARTNER FOUNDATIONS | PRACTICES 01-06

Establish room routines, stance and level changes, then practice dependable partner roles and controlled receiving preparation.

Focus: Share space, stop promptly and ask for a break. / Move in stance and lower through the hips and knees. / Practice immediate release and controlled lowering before partner takedowns.

ENTER, DEFEND AND REACH THE HIPS | PRACTICES 07-12

Introduce leg entries, a controlled double-leg finish, early defense and a grounded go-behind. The single-leg lesson remains an entry without a finish.

Focus: Build a balanced double-leg entry and controlled finish. / Rehearse a single-leg collection with the partner's foot on the mat. / Use retreating steps or a grounded go-behind, then choose a familiar response.

BUILD BASE, ESCAPE AND CONTROL | PRACTICES 13-18

Work from bottom base to the inside-leg stand-up, then introduce the top start and tight-waist chop before reconnecting the escape.

Focus: Build a steady base and rehearse stand-up footwork. / Control the waist wrist, stand, clear and face. / Learn top positioning, a controlled breakdown and base recovery.

CONNECT FAMILIAR WRESTLING CHOICES | PRACTICES 19-24

Revisit the same takedown, go-behind and escape pathways while a partner offers a limited, already-taught response.

Focus: Connect the double leg or grounded go-behind to top control. / Defend a grounded go-behind with controlled pivots. / Choose base recovery, a stand-up or a familiar top objective.

ADD A TURN AND SHOW YOUR TOOLBOX | PRACTICES 25-30

Introduce the half nelson and early defense, review boundaries, and apply taught skills in a restricted mock match or skills festival.

Focus: Rehearse the half nelson and its early defense separately. / Recognize boundaries and restart in an agreed position. / Choose one improvement and celebrate progress through a suitable task.

See this age group in the master index for each practice title and original binder page. Repeat or simplify a block whenever the readiness checks call for it.

Ages 11-14 pathway

EXISTING PRACTICES 01-30 / FIVE FLEXIBLE PHASES

Start with the foundations each athlete needs, then connect attacks, escapes and top decisions. An older beginner can use this entire sequence; experienced athletes can revisit a phase with the plan's harder option.

CHECK MOVEMENT AND STARTING POSITIONS | PRACTICES 01-06

Establish dependable partner routines, stance movement, controlled receiving, entry footwork and recognition of neutral, top and bottom.

Focus: Keep balance and personal space while moving in stance. / Receive a controlled lowering and reset before completed takedowns. / Recognize starting positions and coordinate a level change with entry footwork.

CREATE AN OPENING AND RECOVER | PRACTICES 07-12

Connect hand clearing and angles to entries, a double-leg finish, sprawl-and-go-behind defense and peek-out recovery.

Focus: Clear hands and create an angle before entering. / Distinguish the single-leg entry lesson from the completed double leg. / Rehearse the sprawl, go-behind and peek-out recovery.

BUILD ESCAPES, RIDES AND A TURN | PRACTICES 13-18

Develop bottom base, the stand-up and sit-out-to-hip-heist escape, then add a tight-waist chop, following control and the half nelson.

Focus: Choose the taught hand control for a stand-up or sit-out escape. / Break down a base, then follow as bottom rebuilds. / Learn a controlled half-nelson turn and its early defense.

READ A RESPONSE AND CONNECT POSITIONS | PRACTICES 19-24

Keep the same taught skills while partners make choices. Link neutral wrestling to top control and a purposeful escape, breakdown or turn.

Focus: Choose an attack, counter or recovery from the opponent's response. / Choose among base recovery, stand-up and sit-out escape pathways. / Decide whether to break down, keep control or use the taught turn.

APPLY THE RULES AND CHOOSE WHAT FOLLOWS | PRACTICES 25-30

Use the actual event's rules and boundaries in short practice rounds, an optional coached meet or a skills demonstration, then select one next goal.

Focus: Connect a wrestling outcome to the checked scoring and restart rules. / Pursue one technical goal against an appropriate opponent. / Repair one difficulty, show progress and choose the next learning task.

See this age group in the master index for each practice title and original binder page. Repeat or simplify a block whenever the readiness checks call for it.

After the foundation practices

ADVANCED EXTENSIONS / READINESS FIRST

Choose one extension only after the athlete can meet its prerequisites with control. These are routes into existing advanced cards, not additional compulsory practices.

CONNECT THE DOUBLE LEG TO THE NEXT TOP ACTION

Use A29 to join two familiar skills. Start with a cooperative double-leg finish and tight-waist chop; then let bottom offer the card's single base-rebuild or stand-up response.

Ready when: Revisit B07 and B22 and check bottom base-building with B16. Both partners need the selected finish, side receiving and controlled release. If bottom stands or escapes, release and reset as the A29 drill directs.

Prerequisites: B07, B22, B16

Explore: A29

KEEP WORKING AFTER THE FIRST ESCAPE ATTEMPT

Choose A14 to improve stand-up hand fighting or A15 to turn a short sit into a stand-up. Teach the selected response first, then add the one partner reaction described on its card.

Ready when: Check B17's balanced stand-up, B18's compact sit and B21's hand-controlled finish. Teach B21 explicitly if it has not been covered. The athlete should rise and face with a following partner before trying the connected escape.

Prerequisites: B17, B18, B21

Explore: A14, A15

BUILD A RIDE-TO-TURN CHOICE

First use A19 to connect a spiral ride and near-wrist capture. When those foundations and the half-nelson finish are established, A24 adds a choice: turn when the elbow opens or continue riding when it stays closed.

Ready when: Teach or revisit B24 and B25 before A19. Before A24, also confirm B26, B28 and slow turn receiving. These foundations are separate lessons; finishing the 30-practice path does not establish them automatically. Check each linked card's own prerequisites before teaching.

Prerequisites: B24, B25, B26, B28

Explore: A19, A24

This notes page completes the duplex section. Keep sensitive athlete information in the club's separate secure records.

Your first Grindstone practice

FIRST-PRACTICE CHECKLIST / October 13, 2026

New wrestlers are welcome. Confirm the program and placement with the club, then check TeamSnap before leaving.

WHERE TO GO

Group / school	Address and entrance
Mat Rats recreational team Westminster High School	1225 Washington Road, Westminster, MD 21157. Use the main entrance or the concert entrance.
Pups and Valkyries Winters Mill High School	560 Gorsuch Road, Westminster, MD 21157. Use the entrance by the baseball field.

Times and changes: TeamSnap carries group schedules, arrival instructions, cancellations and changes. Ask the club for access if your family has not received it.

PACK AND PREPARE

Bring comfortable athletic clothes, a labeled water bottle, wrestling shoes and any headgear requested for your group, street shoes for outside, and a change of clothes. Ask what is required on day one before buying gear. Use clean mat footwear and keep jewelry off the mat.

Donated gear: The club keeps donated shoes and headgear from previous seasons. Ask a coach about available sizes and fit, or how to pass along usable outgrown gear.

ARRIVE, LEARN THE ROOM, RESET

Find the coach or team helper and confirm the group. Locate water and gear space, caregiver waiting and pickup arrangements. Tell the coach about an injury, participation restriction or support need. Check in before joining late.

Help your child learn the stop signal, try a movement and work kindly with a partner. Ask for an easier introduction if needed. Encourage effort without coaching over the instructor. After practice, ask what they tried and check the next TeamSnap message.

GET HELP

For placement or TeamSnap access, include your child's age, experience and program of interest when contacting the club.

mailto:grindstonewrestlingmd@gmail.com

https://www.grindstonewrestling.org/contact

Locations, entrances, TeamSnap use and donated gear were confirmed by the club contributor. School addresses were checked against official school information. Current schedules and registration remain with the club.

Programs, ages and teaching levels

CLUB PROGRAMS / PRACTICE AGE GROUPS / TEACHING TIERS

Find the right team information and understand how coaches use this library.

THE CLUB PROGRAM IS WHERE YOU BELONG

Program	Published ages	Starting point
Pups	First year, 4-6	Introductory clinic within Mat Rats: movement, skills and fun, without competitions.
Mat Rats recreational team	6-14	Coed program for new and experienced wrestlers. Placement considers age and experience.
Valkyries	Girls, 5-14	Dedicated girls program welcoming new and experienced wrestlers. Competition is optional.

The club confirms placement, current availability, schedules and registration. These published age ranges are program information, not permission to use every move.

PRACTICE AGE GROUPS HELP A COACH CHOOSE A PLAN

The library has 30 plans each for ages 4-6, 7-10 and 11-14. These groups organize lesson length, language and challenge; they are not separate registration programs. Valkyries coaches can use the same library and adapt it to their athletes.

TEACHING TIERS DESCRIBE A LESSON

Pup: Movement and introductory foundations, usually with simple solo or cooperative tasks.

Beginner: Basic positions and partner techniques. Check the guide's prerequisites before adding resistance.

Advanced: Linked attacks, counters and more demanding control. Prerequisite skills matter more than age.

An older beginner can use a Pup movement drill. An experienced younger wrestler still needs a readiness check. For unassigned Kyle or Facebook entries, read the setup and adaptations.

CHOOSE THE NEXT CHALLENGE TOGETHER

Look for a reliable stop signal, controlled movement, respect for a partner and the ability to show the key action. Start cooperatively and add one challenge at a time. Return to a simpler step when a position breaks down.

Official Mat Rats and Pups information

Official Valkyries information

K01 Down Block Reaction Game

COACH KYLE COLLECTION / TEACHING GUIDE

React to a leg attack by moving the threatened leg, blocking the reaching lane, and recovering a balanced stance.

Readiness: Partners can stay in stance, make a slow controlled reach, and stop immediately. This touch-only game does not require completing a takedown.

Set up: Coach adaptation: Down Block Reaction Game. Put similarly sized partners in separate clear mat spaces, about one arm's reach apart. Name one attacker and one defender; mark a small working area with existing mat lines.

TEACH THE MOVEMENT

1. Start in a staggered stance with hands forward. The attacker's target is a light open-hand touch to the defender's lead knee; the head and face are never targets.

2. On the coach's signal, the attacker gets one controlled level change and reach. No diving, grabbing, or driving through the defender.

3. The defender lowers through the knees, sends the threatened leg back, and places the same-side hand and forearm in the reaching lane. Use a soft barrier, not a slap.

4. Recover the withdrawn foot, lift the blocking hand, and circle to face. The defender must finish balanced rather than turning away.

5. A clean knee touch scores one practice point for the attacker. A successful block plus balanced recovery scores one for the defender. These are game points, not match scoring.

6. After every attempt, both freeze, return to the starting distance, and reset. A collision, uncontrolled reach, or step outside the working area ends the attempt without a point.

7. After 20 seconds, swap roles. Play two turns each, then let both partners name one good reaction they noticed.

COACHING CUES

Hand down, same leg back. / Make a wall, not a slap. / Circle and face. / One attempt, then reset.

Written instruction references:

USA Wrestling - Folkstyle Level 1 (foundations)

USA Wrestling - Drills, Activities & Games

K01 Practice notes

COACH KYLE COLLECTION / Down Block Reaction Game

PRACTICE AND ADAPT

Down Block Reaction Game: Pairs, one reaching attacker and one defender; coach checks spacing and stop signal.

Suggested dose: Four 20-second rounds with 20 seconds to rest and swap. One point per successful touch or block-and-recover.

Look for: Finish at least three controlled attempts per turn with both partners balanced and facing.

Ages 4-6: Coach calls each attempt separately. Use a slow knee touch and reward the whole pair for good resets; no fakes or competition needed.

Ages 7-10: Use the full touch-only game. Add one fake only after athletes react with their feet instead of slapping.

Ages 11-14: Allow circling before the single reach. A coach may later add a separate controlled shot-defense drill, but keep the game touch-only.

COMMON PROBLEMS

Defender swats with the hand but leaves the lead leg in place. Practice the hand drop and leg withdrawal together twice without an attacker.

Attacker dives or keeps chasing after the attempt. Shorten the reaching distance and enforce one reach followed by a complete reset.

BOUNDARIES AND READINESS

No contact to the head, neck, or face; no strikes, grabs, or takedowns.

Keep elbows soft and stop before partners collide.

If a leg is accidentally caught, freeze and release instead of twisting free.

VIDEO AND SOURCE NOTES

Iron Faith Wrestling - Our middle school wrestlers are already hard at work in the off-season #ironfaith #wrestling

https://www.youtube.com/shorts/xSYQ22AI4Zw

The complete rules and scoring here are a Grindstone coaching adaptation. A few paused frames of the submitted Iron Faith clip show standing and kneeling partners exchanging positions, but do not establish its exact rules or scoring. This standing touch-only version is not a transcript of that game.

K02 Stance & Motion Warm-Up

COACH KYLE COLLECTION / TEACHING GUIDE

Warm up the stance, footwork, and level changes that let a wrestler attack and defend without losing balance.

Readiness: Can bend through the hips and knees comfortably and move without crossing the feet.

Set up: Solo stance-and-motion progression. Spread wrestlers far enough apart for a step in every direction. Begin at an easy pace; the coach demonstrates from the front and side.

TEACH THE MOVEMENT

1. Set feet about shoulder-width apart with one foot slightly forward. Bend hips and knees, keep the chest lifted, and hold hands in front with elbows close.

2. Move forward by stepping the lead foot a short distance, then bringing the rear foot along. Keep the original gap between the feet.

3. Move backward with the rear foot first. Move sideways with the foot nearest that direction first; do not click heels together or cross the feet.

4. Circle around an imaginary partner while keeping the shoulders facing the center. Use short steps and change direction on the coach's signal.

5. Add a level change: lower the hips by bending both knees, then return to stance. Keep eyes forward rather than folding the chest to the floor.

6. Combine 10 seconds of motion, one level change, and a balanced freeze. Add one already-taught penetration step or solo sprawl only after the stance stays intact.

7. Finish with easy movement and one steady stance check. This warm-up ends with athletes ready to learn, not exhausted.

COACHING CUES

Small steps, same stance. / Move the nearest foot first. / Hips down, eyes forward. / Freeze ready to wrestle.

Written instruction references:

USA Wrestling - Folkstyle Level 1 (foundations)

K02 Practice notes

COACH KYLE COLLECTION / Stance & Motion Warm-Up

PRACTICE AND ADAPT

Coach's Compass: Coach points forward, backward, or sideways; athletes move in their own spaces.

Suggested dose: Three 30-second rounds, with 20 seconds to rest and hear one correction.

Look for: Keep the feet apart and recover the same balanced stance after every direction change.

Ages 4-6: Use 10-15-second follow-the-leader rounds with a playful freeze signal; teach one direction at a time.

Ages 7-10: Add level changes and brief stance checks. Use a partner mirror only after spacing is reliable.

Ages 11-14: Add purposeful fakes, changes of direction, and one known entry; keep technique sharper than speed.

COMMON PROBLEMS

Feet cross or meet when changing direction. Slow the pace and follow mat lines for two short steps each way.

Level changes come from bending the back. Have athletes lower the belt line while keeping the chest facing the coach.

BOUNDARIES AND READINESS

Leave clear space behind each athlete before adding sprawls.

No head drops, knee slams, or crowded sprinting.

Reduce the duration if athletes can no longer hold a useful stance.

VIDEO AND SOURCE NOTES

GOhioCasts - Kolat Warm Up Stance And Motion

https://www.youtube.com/watch?v=brvx9MPnfhA

A standard stance-and-motion warm-up, supported by the existing stance guides. The submitted GOhioCasts/Kolat footage was not reviewed; the timings and sequence here are a coaching plan.

K03 Build a Takedown System

COACH KYLE COLLECTION / TEACHING GUIDE

Build a small attack system: one reliable setup, one primary attack, and one response when the opponent changes position.

Readiness: The wrestler can already perform the selected setup and both finishes cooperatively. A system connects learned skills; it does not replace learning them.

Set up: Worked example: wrist-and-inside tie to sweep single, with a snap-down/go-behind when the partner stays heavy and leans forward. Use these library skills or substitute an equally familiar pair with the coach.

TEACH THE MOVEMENT

1. Name the starting position and the intended reaction. For this example, use wrist-and-inside control and circle to make the partner move a foot.

2. Rehearse the primary attack alone: when the target foot steps into range, lower the hips and enter the already-taught sweep single.

3. Complete its familiar low finish, establish top control, and reset. Do not introduce a new lift or finish while learning the decision.

4. Rehearse the alternative separately: when the partner keeps the legs back but leans into the tie, use the taught snap-down and circle behind.

5. The partner now gives one announced reaction - step or lean. The attacker names the opening and performs the correct branch at a cooperative pace.

6. Remove the announcement. The partner chooses one of the two reactions; the attacker reads it, attacks once, and resets if neither opening is available.

7. After each short round, identify where the decision broke down: the tie, recognizing the reaction, entering, or finishing. Fix that piece before adding a third branch.

COACHING CUES

Move them, read them, attack. / One setup, two answers. / Take the opening you earned. / No opening: reset.

Written instruction references:

USA Wrestling - Folkstyle Level 1 (foundations)

USA Wrestling - Folkstyle Level 2 (progressions)

Cary Kolat - Teaching curriculum and skill progression

K03 Practice notes

COACH KYLE COLLECTION / Build a Takedown System

PRACTICE AND ADAPT

Two-Answer Takedown: Pairs begin in the same tie; partner chooses a step into range or a controlled forward lean.

Suggested dose: Two sets of four decisions each, switching attacker after each set. Rest and correct between sets.

Look for: Choose the correct attack on three of four readable reactions while maintaining control.

Ages 4-6: Use a movement choice instead of takedown chains: partner steps away or turns, athlete follows and faces.

Ages 7-10: Use one setup and two familiar, cooperative answers. Announce the reaction first.

Ages 11-14: Progress to a light situational round with only the two chosen answers; review the decision rather than counting wins.

COMMON PROBLEMS

Athlete memorizes a sequence regardless of the partner's response. Have the partner exaggerate one of two reactions and ask the athlete to name it before moving.

Too many techniques are added at once. Return to one primary attack and one already-learned alternative.

BOUNDARIES AND READINESS

Both finishes must already be taught with controlled receiving.

Do not force an attack when the partner's feet or knees become trapped.

Stop the exchange when the first controlled finish or clear defensive recovery occurs.

VIDEO AND SOURCE NOTES

Iron Faith Wrestling - Every Good Wrestler has One of These #wrestling #ironfaith

https://www.youtube.com/shorts/RK1tz6CXGzo

The example system is a Grindstone practice design using existing library techniques. It is not a verified list of techniques in the submitted Iron Faith video.

K04 Sweep Dump

COACH KYLE COLLECTION / TEACHING GUIDE

Finish a controlled single leg by moving the opponent off balance and guiding them down. This guide teaches a basic standing single-leg dump; the sweep is a possible entry, not the finish itself.

Readiness: The wrestler can hold a single leg with balanced feet, keep the partner close, and lower a partner under control. Teach the finishing position before adding a shot. Partners should be similar in size and able to follow the turn without planting a stiff arm.

Set up: Begin with the attacker already holding the partner's right leg between the attacker's thighs, just above the knee. The attacker's head is inside, against the partner's torso, with eyes forward and a neutral neck. Both hands connect around the leg, elbows close, and both of the attacker's feet stay on the mat. The partner keeps the captured knee comfortably bent and balances on the other foot.

TEACH THE MOVEMENT

1. Set the hold first: bring the captured leg close to your body, connect your hands, and shorten your arms. Keep your chest up and hips beneath you rather than hanging from the knee with straight arms.

2. Take two small steps with the partner so both wrestlers can feel the balance. Keep your head connected to the torso and your feet separated; do not squeeze or twist the knee between your legs.

3. Create the finishing angle by stepping your outside foot backward and around. In this example, that is your left foot, farther from the partner's standing leg. Keep the other foot underneath you so you turn from a stable stance.

4. Lower your hips with bent knees while drawing the captured knee toward your left hip. Turn your torso with your feet and guide the partner's upper body across the controlled leg. The leg and body move together; do not rotate the foot against a fixed knee.

5. Continue the small turn until the partner loses the standing-foot balance and sits to the hip. Keep supporting the captured leg through the descent. Do not add a lift, jump, or hard drop to make the finish happen.

6. Follow the partner down with your chest and hips under control, then move behind the hips into a stable top position. Adjust or release the leg grip so the partner's knee is not trapped underneath either wrestler.

7. Pause to show control, release, and help the partner reset. Switch roles after a few clean repetitions; mirror the entire sequence for the other leg.

COACHING CUES

Hug the leg; chest tall. / Small back step, then turn. / Move the body and leg together. / Guide the landing; cover the hips.

Written instruction references:

Dalton Bullard - Dump Single Leg Finish

Cary Kolat - Developmental teaching curriculum

Coach Kyle's selected clip - Single Dump, Iron Faith Wrestling

K04 Practice notes

COACH KYLE COLLECTION / Sweep Dump

PRACTICE AND ADAPT

Single-leg balance to controlled dump: Start with the leg already secured. The partner gives balance but no active counter; the coach checks hand position and the landing space.

Suggested dose: Three controlled finishes each, switch roles, then repeat on the other side. Add the sweep-single entry only after both partners can finish and land smoothly.

Look for: Complete the angle change, a supported hip landing, and a stable top finish without hopping, lifting, or twisting a knee.

Ages 4-6: Use stance and balance games plus a coach-held single-leg position. Practice holding and releasing; use only a closely assisted sit-to-hip finish when both children are ready.

Ages 7-10: Begin from the captured leg, rehearse the back step without a finish, then add a gentle hip landing. Keep resistance cooperative until the finish is reliable.

Ages 11-14: Link the entry to the finish and add a partner who changes balance gradually. Teach the decision to switch finishes when the dump angle disappears.

COMMON PROBLEMS

The attacker bends at the waist and pulls with long arms. Stop in the starting position, bring the leg close, and bend the knees so the feet and hips can produce the turn.

The attacker twists the captured foot while the partner's body stays still. Keep the ankle and knee aligned. Move the partner's balance with footwork and torso position instead of twisting the joint.

The partner hops repeatedly and the attacker keeps yanking harder. Reset the angle and close the space. If the position no longer supports the dump, return to the coach's single-leg finishing choice instead of forcing it.

BOUNDARIES AND READINESS

Keep the captured knee in its comfortable bending direction; never twist a fixed lower leg.

Support the descent and leave the partner room to land on the hip. No slam or high lift is part of this progression.

Reset if either athlete loses balance, the knee becomes trapped, or a partner reports discomfort.

VIDEO AND SOURCE NOTES

Iron Faith Wrestling - Single Dump

Coach-written standard single-leg dump progression supported by the cited coaching sources. The selected clip's publisher title is Single Dump; playback and a transcript were not reviewed. These steps do not claim to reproduce its exact grip, entry, or finish.

K05 Lead-Arm Down Block

COACH KYLE COLLECTION / TEACHING GUIDE

Check a reaching shot with the lead-side arm while withdrawing the leg, then recover a useful angle for defense or a later reattack.

Readiness: Balanced stance, level change, and the Down Block and Circle guide. Partner can stop a slow entry before impact.

Set up: Standard lead-arm down block, shown with the defender's right foot forward. Begin with a cooperative reach toward that leg; mirror only after one side is clear.

TEACH THE MOVEMENT

1. Hold a staggered stance with the right foot forward and hands between the partner and your legs. Watch the partner's shoulders and level change.

2. As the partner reaches for your right leg, bend the knees and send that leg straight back.

3. At the same time, lower the right hand between the reaching arms and your right leg. The forearm occupies the path; it does not strike the head or lock rigidly against the attack.

4. Keep the left hand available and the head up. Replace the right foot on the mat with enough width to stay balanced.

5. Lift the blocking hand and take short circling steps to your left, turning your chest to keep facing the attacker.

6. When the attack stops, recover stance. If a coach has already taught a reattack, add it only after balance, distance, and the opening are restored.

COACHING CUES

Hand down, same leg back. / Block the lane. / Circle with your chest facing. / Balance before reattack.

Written instruction references:

USA Wrestling - Folkstyle Level 1 (foundations)

K05 Practice notes

COACH KYLE COLLECTION / Lead-Arm Down Block

PRACTICE AND ADAPT

Check, Circle, Freeze: Attacker alternates a slow single-leg reach and a harmless level-change fake.

Suggested dose: Three slow repetitions each, then two 20-second turns per partner with 20 seconds between.

Look for: Move the threatened foot and finish facing without a collision or uncontrolled slap.

Ages 4-6: Practice solo hand-down/leg-back reactions, then the touch-only Down Block Game.

Ages 7-10: Use slow partner reaches and stop at recovered stance.

Ages 11-14: Add one familiar reattack only when the initial defense creates a real opening; do not rush through the reset.

COMMON PROBLEMS

Athlete reaches down from the waist and leaves the leg forward. Rehearse a knee bend, hand barrier, and leg withdrawal as one slow action.

Defender spins away with the back exposed. Use two small circle steps while keeping eyes and chest on the partner.

BOUNDARIES AND READINESS

No slapping, head striking, or rigid straight-arm impact.

If the attacker secures the leg, freeze and reset this drill rather than twisting out.

Use a full sprawl only as a separately taught response when the attack gets deeper.

VIDEO AND SOURCE NOTES

https://www.youtube.com/shorts/U32MAW-r5CE

This is the library's standard lead-arm down-block progression. The submitted Rhino Wrestling clip describes checking and reattacking, but its precise arm contact and sequence have not been verified.

K06 Single-Leg Defense

COACH KYLE COLLECTION / TEACHING GUIDE

Defend a head-inside single leg on the mat by recovering hip pressure, freeing the captured leg, and returning to a useful wrestling position. This is a grounded single-leg defense foundation, distinct from an unverified elbow-lift variation.

Readiness: The wrestler can sprawl, balance on a free foot, and circle without pulling an opponent's arm behind the shoulder. Introduce a stationary, cooperative single-leg position before adding a moving shot.

Set up: The attacker kneels with the defender's right leg gathered in both arms and the head inside beside the defender's right hip. The defender has the free left foot underneath the body and enough space to send the right leg backward. This setup is not a high single with the foot lifted to waist height.

TEACH THE MOVEMENT

1. Face the attacker and keep a usable base on the free left leg. Place one open hand on the attacker's shoulder or upper back to manage distance; use the other hand to control the upper arm just above the elbow. Keep all pressure off the throat.

2. Send the captured right leg backward and down while keeping the free left knee bent. Bring your hip pressure toward the attacker's shoulder line instead of sitting to the mat or remaining upright over the grip.

3. Rotate your hips enough to lengthen the captured leg and reduce the attacker's hold behind your knee. Keep the right knee and toes turning together; do not twist your knee while the foot is stuck.

4. Continue the hip pressure until the opponent's hands slide higher on your thigh and can no longer hold your knee tightly. Keep your upper-arm control steady without lifting, wrenching, or levering the elbow.

5. Move your free foot in short steps around the outside of the attacker, away from the side where their hands are locked. Maintain the leg extension and shoulder control until your knee and then your foot clear the arms.

6. Once the leg is free, square up in stance if space opens. If you still have safe control over the shoulders, circle behind and cover the hips. Do not race around while leaving the captured leg trapped.

7. Release the controls, return to the starting single, and switch roles. On the next set, mirror the sides so both wrestlers learn which leg must lengthen and which leg supports the base.

COACHING CUES

Free leg bends; caught leg gets long. / Hips back and heavy. / Free the knee before you chase behind. / Control the arm; do not crank it.

Written instruction references:

Eric Guerrero - Single Leg Defense to Prevent Your Opponent From Scoring

John Smith - Cowboy Defense curriculum, including elbow-lift variations

Coach Kyle's selected clip - Lift the Elbow, Coach Lang

K06 Practice notes

COACH KYLE COLLECTION / Single-Leg Defense

PRACTICE AND ADAPT

Single-leg position, release, and recover: One partner holds the shallow kneeling single without squeezing. The defender starts balanced and the coach identifies the captured leg, free leg, and locked-hand side.

Suggested dose: Three slow releases per side, then three with the attacker maintaining a light grip. Finish every repetition in stance or a balanced go-behind.

Look for: Clear the knee and foot through hip pressure and movement, with no elbow torque or uncontrolled fall.

Ages 4-6: Practice a solo sprawl and recovery to stance. With a partner, use only a loose touch on the leg and an immediate release when the child moves it back.

Ages 7-10: Start from the shallow kneeling hold. Teach the supporting leg and captured leg separately before linking the circle and go-behind.

Ages 11-14: Add gradual grip pressure and a moving single-leg entry. Teach that a high single, a head-outside shot, and a deep corner finish require different responses.

COMMON PROBLEMS

The defender tries to pull the leg out using the knee alone. Use the whole-body position: extend the leg, rotate the hips, and keep pressure over the attacker's shoulder line.

The defender drops both knees to the mat and loses pressure. Keep the free leg active as a support and the captured leg extended until it is clear.

The defender yanks the elbow upward to imitate the clip title. This foundation uses steady upper-arm control. Save any specific elbow-lift defense for a coach-demonstrated grip and position.

BOUNDARIES AND READINESS

No neck pressure, elbow crank, or sudden twisting of the captured knee.

Keep the drill on the mat at a low level; this sequence is not a high-single return or counterthrow.

If the attacker has turned the corner deeply or the defender's foot is trapped, stop and reposition instead of forcing the circle.

VIDEO AND SOURCE NOTES

Coach Lang - Lift the Elbow

https://www.youtube.com/shorts/4hGg0Erm_yo

The written instruction is a standard grounded single-leg defense foundation based on the Guerrero lesson, not a transcript of Coach Lang's Lift the Elbow. The selected clip's exact elbow, grip, and starting position remain unreviewed.

K07 Slide-By

COACH KYLE COLLECTION / TEACHING GUIDE

Use an opponent's forward collar-tie pressure to clear their arm and move behind. This progression teaches a collar-tie slide-by with a standing finish.

Readiness: Athletes can hold a balanced stance, move sideways without crossing their feet, and release ties immediately. Rehearse wrist and inside control in B04 first.

Set up: Partners face each other in stance at bent-arm distance. The receiver takes a light right-hand collar tie; the attacker uses a light right-hand collar tie of their own. The attacker's free left arm will clear the receiver's right upper arm.

TEACH THE MOVEMENT

1. Begin with feet underneath the hips and elbows bent. Make contact at the upper arm and back of the head without hanging body weight on the partner's neck.

2. Give a small forward step and pressure, then wait for the partner to step back into you. The trigger is their returning pressure, not a harder tug.

3. Bring your free left forearm against their right upper arm just above the elbow. Guide that arm past your left shoulder while stepping your left foot outside their right foot.

4. Turn your hips out of the path of their step. Your right collar-tie hand guides their upper body past you; your feet create the opening.

5. As their right shoulder passes, release the collar tie and move your right hand toward their near hip. Bring the trailing foot around without crossing your legs.

6. Follow behind the hips, place open hands at the waist, and freeze with both wrestlers standing. Release and reset; if they square up before you gain the angle, restart rather than wrenching the arm.

COACHING CUES

Feel the return pressure. / Clear the elbow; step out of the lane. / Feet around, hands to the hips. / Finish balanced.

Written instruction references:

Daryl Weber • Pass-by / Slide-by Series

USA Wrestling • Folkstyle Level 1: ties, stance, snap and spin

K07 Practice notes

COACH KYLE COLLECTION / Slide-By

PRACTICE AND ADAPT

Pressure, clear, freeze: Pairs in separate mat lanes; one light collar tie each. A coach first cues the receiver's forward step.

Suggested dose: Three slow repetitions per side, then two 20-second rounds each with a 20-second role-change break.

Look for: Arrive behind without pulling the neck, crossing feet, or losing balance. The receiver stays standing and follows the guided step.

Ages 4-6: Use a no-contact sidestep-and-follow game. One child walks past; the other turns to follow at arm's length. Save collar-tie pressure for later readiness.

Ages 7-10: Use cooperative collar ties only after grip-and-release practice. Stop at the hip touch; no trips or mat returns.

Ages 11-14: Let the receiver choose whether to give forward pressure. Attack only when it arrives, and reset if the angle closes. Add a separately learned finish only after standing control is reliable.

COMMON PROBLEMS

Pulling straight backward and staying in front. Mark an outside step beside the partner's foot and combine that step with the arm clearance.

Reaching with a straight arm or bending the neck sideways. Move closer with bent elbows, reduce pressure, and turn the hips while guiding the upper body together.

Trying to complete the move after the partner faces you again. Release, return to stance, and create a new reaction.

BOUNDARIES AND READINESS

Contact above the elbow, not through the elbow joint. Do not lever a straight arm.

Release neck control as you pass. No head yanks, standing lifts, or blind mat returns in this drill.

VIDEO AND SOURCE NOTES

Rhino Wrestling NJ - Coach Brewer shows a high-percentage takedown built on pressure, timing, and clean angles.

https://www.youtube.com/shorts/J0Uc0U0UYTk

The submitted Short is labeled Slide-by. These are Grindstone's collar-tie slide-by teaching steps, based on the linked pass-by/slide-by lesson and existing tie foundations; the Short's exact grips and finish have not been verified. Names for slide-bys and pass-bys overlap between coaches.

K08 Pass-By

COACH KYLE COLLECTION / TEACHING GUIDE

Redirect a collar-tie arm as the opponent steps into you, then pass their shoulder and reach the hips. This guide selects the palm-over-elbow pass-by and a standing stop.

Readiness: Balanced stance, B04 tie control, and the ability to follow a partner's guided step. Athletes must release an arm as soon as it straightens or catches.

Set up: The receiver takes a light right-hand collar tie. The attacker has a right-hand collar tie and places the free left palm on the outside/top of the receiver's right upper arm just above the elbow.

TEACH THE MOVEMENT

1. Stand close enough to keep both elbows bent. Keep your hips under your shoulders and look toward the partner's chest.

2. Use a small forward step to invite a step back into you. Keep the collar tie light; the receiver supplies the agreed forward reaction.

3. As that step arrives, use your left palm to guide their upper arm past your left shoulder. Move your left foot outside their right foot at the same time.

4. Turn your body out of the lane and let their shoulder travel past. The right collar tie guides the same direction; neither hand pulls the head away from the torso.

5. Release head control once the shoulder has cleared. Reach to the near hip and follow with your trailing foot until you are behind their hips.

6. Freeze with separate hands at the waist and both partners standing. If the receiver squares up, return to stance; a knee-block or mat-return finish is a separate lesson.

COACHING CUES

Pressure first, pass second. / Move yourself out of the way. / Guide the upper arm. / Catch the hips and freeze.

Written instruction references:

Daryl Weber • Pass-by / Slide-by Series

USA Wrestling • Folkstyle Level 1: ties, stance, snap and spin

K08 Practice notes

COACH KYLE COLLECTION / Pass-By

PRACTICE AND ADAPT

Open the lane: Use a mat line as the receiver's walking lane. The attacker begins alongside the line in the agreed tie.

Suggested dose: Four cooperative repetitions each, then two 20-second rounds of one-step reactions; change roles between rounds.

Look for: Guide a single forward step past the body and gain a controlled hip touch. Count balanced repetitions, not forceful takedowns.

Ages 4-6: Practice stepping aside from a walking partner without ties. Use a coach's open palm as a gentle target for an upper-arm touch.

Ages 7-10: Use a predictable forward step and freeze at the hip. Teach the palm position separately from the full motion.

Ages 11-14: Vary the timing of the receiver's step. Add a choice between reset and a previously taught attack when the receiver squares up.

COMMON PROBLEMS

Pushing only with the hand while the feet stay planted. Practice the outside step without contact, then add the light upper-arm guide.

Pulling the partner into the attacker's chest. Turn the hips and leave an open lane beside the body.

Grabbing the wrist and twisting the whole arm. Return to palm contact above the elbow and guide a bent arm; release when the arm is trapped.

BOUNDARIES AND READINESS

Keep the head and shoulders moving together; do not twist the neck against a trapped arm.

This written drill ends standing. Do not add the takedown from a different clip without teaching its landing first.

VIDEO AND SOURCE NOTES

Brooklyn Mixed Martial Arts - Beautiful Takedown (Wrestling) #mma #wrestling #takedowns #breakdown #grappling #bjj #judo

https://www.youtube.com/shorts/URFxDrRdok0

The supplied video's title describes a takedown generally. This is a named standard palm-over-elbow pass-by progression, not a claim that the video uses these exact grips. K07 uses a forearm clearance; this page uses a palm guide.

K09 Snap-Down

COACH KYLE COLLECTION / TEACHING GUIDE

Use a forward-leaning opponent's movement to bring their hands to the mat, then go behind while maintaining shoulder and arm control.

Readiness: B01-B02 stance and footwork, plus the ability to lower onto hands and knees with bent elbows. Start with B10's cooperative receiving drill.

Set up: Partners begin in a balanced stance. For this example, the attacker has a right-hand collar tie and left-hand control around the receiver's right triceps, above the elbow.

TEACH THE MOVEMENT

1. Keep your elbows bent and your feet underneath you. The receiver gives a small, agreed forward lean rather than bracing the neck.

2. Step backward and lower your hips as you guide the head and controlled upper arm toward you and downward together.

3. The receiver lowers onto hands and knees, bending the elbows and keeping the head clear of the mat. Reduce the pull as soon as their hands arrive.

4. Keep your chest near their shoulders with your feet back. Release the collar tie and use your left hand or forearm to block their right upper arm.

5. Circle to your left around their right side. Keep the arm blocked so the receiver cannot simply turn to face while your feet move.

6. Reach your right hand to their right thigh or near hip, continue behind the hips, and cover with separate hands. Settle without dropping weight; release and reset.

COACHING CUES

Step back; hips lower. / Hands land, head stays clear. / Block the arm; feet around. / Cover the hips.

Written instruction references:

USA Wrestling • Folkstyle Level 1: ties, stance, snap and spin

USA Wrestling • Folkstyle Level 2: high-crotch change-off and go-behinds

Grindstone • reviewed Snap-Down Go-Behind (B10)

K09 Practice notes

COACH KYLE COLLECTION / Snap-Down

PRACTICE AND ADAPT

Snap, block, circle: Begin with the receiver already on hands and knees to rehearse the go-behind. Add the standing approach only after the receiver's controlled lowering is reliable.

Suggested dose: Three go-behinds each from the mat, then three cooperative snaps each. Finish with two 15-second position rounds for ready partners.

Look for: Maintain the arm block through the angle change and arrive behind the hips. Receiver may turn to face; attacker resets if control is lost.

Ages 4-6: Use a no-neck-contact circle-behind game around a stationary partner or marker. A coach supervises spacing and gentle hip touches.

Ages 7-10: Teach the mat go-behind first, then a light cooperative snap. End each repetition when stable control is established.

Ages 11-14: Let the receiver react by circling or recovering stance. Emphasize maintaining control or resetting instead of increasing neck pressure.

COMMON PROBLEMS

Yanking only the head while leaving the arm behind. Slow down and move the upper arm with the head. Rehearse the partner lowering to the mat before adding a snap.

Dropping both knees underneath the partner after the snap. Keep the feet back so the chest can guide the shoulders without collapsing forward.

Releasing all contact and racing around. Hold the upper-arm block until the circling footwork gives you hip control.

BOUNDARIES AND READINESS

Never use the publisher's phrase about eating the mat as an instruction to drive the face down.

Stop for head impact, throat pressure, neck discomfort, or a straight-arm landing. The receiver must have room to bend the arms.

VIDEO AND SOURCE NOTES

Rylan Seacrist - Eat the mat... #wrestling #technique #viral

https://www.youtube.com/shorts/5qPezf-0pmw

This guide expands the reviewed B10 snap-and-go-behind progression. The supplied Short's exact tie and hand transfer have not been footage-verified; use this controlled version for the written lesson.

K10 Single-Leg Finish

COACH KYLE COLLECTION / TEACHING GUIDE

Finish a standing single leg by taking away the partner's remaining step, then following the hips to controlled top position.

Readiness: A secure standing single leg, balanced hopping, and a receiver who can lower forward to hands and forearms with soft elbows and the head clear. Teach the finish only after both athletes can stop at each position without falling. The front-trip finish is readiness-dependent.

Set up: Standard high-single front-trip progression, starting with the captured leg already raised. This explains a front-block finish; it does not claim to reproduce the submitted clip's exact uppercut grip change. For this example, hold the partner's right leg and keep your head on the inside of that thigh.

TEACH THE MOVEMENT

1. Stand close with knees bent and feet underneath you. Secure the partner's right lower leg high against your left side; the left arm hugs the leg while the right forearm supports underneath the knee. Keep the captured knee comfortably bent and the foot untwisted.

2. Bring the captured leg toward your left armpit while stepping your hips closer. Lift with your legs and supporting forearm as a scoop, not an arm strike. Keep your face beside the inside of the thigh and your back aligned.

3. Take short steps toward the partner so the standing left leg carries their weight. Keep their captured leg connected to your body; do not stretch it sideways while they hop away.

4. At walking speed, place your right leg across the front of their standing left thigh, just above the knee, as a stationary block. Your hips remain close and your supporting left foot stays planted. Pause here while the coach checks that the block is not pressing sideways through the knee joint.

5. Keep the captured leg close as the front block takes away the forward recovery step. Guide the partner's body forward under control rather than kicking the standing leg. The receiver meets the mat with hands and bent elbows, lowers to the forearms, then brings the knees and torso down under control while keeping the head clear.

6. As the partner reaches the mat, remove the leg block, lower the captured foot, and follow around to cover the hips. Support the leg until the body is down; do not keep it elevated as the torso lands. Release once both athletes are stable, then reset upright.

COACHING CUES

Leg close, hips close. / Scoop; do not strike. / Block the step, do not kick. / Guide down and cover.

Written instruction references:

Cary Kolat - Single Leg Front Trip Finish

Heath Sims / Evolve University - Outside Single Leg to Front Trip

TODAY! Fitness - Wrestling takedown reference, single leg with front trip

Logan Stieber - Front-trip reaction within the Tomahawk Trip lesson

K10 Practice notes

COACH KYLE COLLECTION / Single-Leg Finish

PRACTICE AND ADAPT

Hold, Front Block, Controlled Finish: Use matched partners in a clear mat lane. Begin in the high-single hold without an entry. First practice only the hold and blocked-step position.

Suggested dose: Three position-only repetitions each; when those are stable, three slow guided finishes each. Reset after every repetition.

Look for: Reach the front-block position without twisting either leg, then guide a forward hands-to-forearms lowering and cover the hips without a drop.

Ages 4-6: Use stance, balance, and single-leg touch games. Do not add this elevated-leg trip.

Ages 7-10: Athletes with reliable single-leg control may practice the hold and step placement with the coach. Keep the full finish for partners who already demonstrate controlled landings.

Ages 11-14: Progress from holds to guided finishes, then add the single-leg entry. Add the clip's uppercut transition only after the coach has reviewed and demonstrated that exact variation.

COMMON PROBLEMS

The attacker leans back with the held leg far from the body. Stop before the trip. Bend the knees, step closer, and return the captured leg to the side before continuing.

The athlete kicks at the standing knee or sweeps without body control. Use a stationary above-knee contact check and freeze. Resume only with the coach controlling the pace and the receiver prepared to lower.

BOUNDARIES AND READINESS

Do not kick, reap, or apply sideways pressure through the planted knee; the block contacts above the joint and the bodies move together.

Do not crank the captured ankle, split the legs apart, lift the whole partner, or drop onto the partner.

Both hands must be free to receive the forward descent with soft elbows. No rigid-arm post, face-first fall, or collapse through the neck. Stop immediately if the receiver cannot lower under control.

VIDEO AND SOURCE NOTES

Pursuit Wrestling - UPPER-CUT to FRONT-TRIP

https://www.youtube.com/shorts/iHWlpyBA_wY

Selected paused frames of the submitted Pursuit Wrestling clip show a raised-leg hold and a front-trip finish forward onto the hands/forearms. The complete clip, audio, and exact uppercut grip transfer have not been reviewed. This written standard front-trip progression uses the linked instruction references; it is different from run-the-pipe and a backward heel-sweep finish.

K11 High-Crotch to Double

COACH KYLE COLLECTION / TEACHING GUIDE

Convert a secure head-outside high crotch into a double leg by recovering the feet before changing the inside hand to the far knee.

Readiness: A controlled penetration step, B07 double-leg finishing on both sides, and a partner who can receive a low side landing without a rigid arm post.

Set up: Use the left-lead example from A04 throughout the demonstration. The receiver is cooperative, and both athletes begin from a low, balanced stance with clear mat space to the attacker's left.

TEACH THE MOVEMENT

1. Clear the receiver's hands, lower your hips, and step your left foot between their feet. Let the left knee touch softly as you close the space.

2. Reach your left arm between their thighs around their left leg behind the knee. Join your right hand from outside. Keep your head upright on your right, outside their left hip, and your shoulder close.

3. Bring your right trail foot forward outside their left foot. Use it to lift your left knee off the mat and bring your hips underneath your chest.

4. Keep the near leg close with both hands until it becomes light. Do not reach away for a second leg while stretched out on your knee.

5. Keep your right hand behind their left knee. Move your inside left hand to their far right knee, keeping your elbows close.

6. Take short steps diagonally to your left across their stance while gathering the knees toward your right. The receiver lowers onto their right hip and side; this drill uses no standing lift.

7. Follow over the hips, settle with control, and release on the reset call. Mirror every hand, foot, and finish direction when teaching the other side.

COACHING CUES

Close the gap before the knee lands. / Trail foot up; hips underneath. / Inside hand changes. / Drive left; knees right.

Written instruction references:

USA Wrestling • Folkstyle Level 2: high-crotch change-off and go-behinds

USA Wrestling • High Crotch Change Off to Double

Grindstone • reviewed High Crotch to Double (A04)

K11 Practice notes

COACH KYLE COLLECTION / High-Crotch to Double

PRACTICE AND ADAPT

Entry, feet, change-off: Start in a cooperative low high-crotch position. Freeze once after recovering the trail foot and once after the hand change.

Suggested dose: Three low-position conversions each, then three from a cleared tie. Add two 20-second entry rounds only after landings are controlled.

Look for: Recover the feet before reaching the far knee and complete a low, balanced side finish. Reset if the entry stretches out.

Ages 4-6: Practice stance, level changes, and penetration footwork without lifting or finishing on a partner. Use a soft target for hand placement.

Ages 7-10: For athletes ready for controlled takedowns, rehearse the entry and change-off in separate freezes. Beginners stay with the familiar double-leg finish.

Ages 11-14: Link the entry and change-off smoothly, then let the receiver retreat one step. The attacker must close distance or reset instead of reaching.

COMMON PROBLEMS

Reaching for the far knee while the trail foot stays behind. Return to the high-crotch hold, recover the trail foot, and lift the attacking knee before changing hands.

Driving straight ahead into the partner's knees. Identify the left-hand corner and take short steps across the stance.

Switching the head position or finish direction halfway through. Keep one fully demonstrated side for the set. Mirror the entire sequence only at the role-change break.

BOUNDARIES AND READINESS

Keep the neck aligned and the head beside the hip, not dropped beneath the torso.

No standing lift, twisting a trapped knee, or rigid posting during the landing. Stop and reset if either partner loses control.

VIDEO AND SOURCE NOTES

Pursuit Wrestling - HIGH-CROTCH to RUN-DOUBLE

https://www.youtube.com/shorts/slA2YDe4qKA

The supplied video title names High-Crotch to Run-Double. This written left-lead progression follows the reviewed A04/USA Wrestling change-off, with a controlled low finish. The linked Short's precise entry and pace are not presented as verified.

K12 Arm Drag

COACH KYLE COLLECTION / TEACHING GUIDE

Use wrist and triceps control to draw one arm across, step around that shoulder, and reach behind while both wrestlers stay standing.

Readiness: B04 wrist and inside-tie control, short balanced steps, and prompt release. The receiver must be able to step with the pull instead of bracing an extended arm.

Set up: Face a cooperative partner in stance. This example drags the receiver's right arm: your left hand controls their right wrist and your right hand will cup above their right elbow.

TEACH THE MOVEMENT

1. Take their right wrist with your left hand, gripping above the hand so the wrist stays straight. Keep your elbows near your body.

2. Guide that wrist down and across while your right hand reaches beneath their right upper arm and cups the triceps just above the elbow.

3. Step your left foot outside their right foot as you draw their elbow across toward your right hip. Let your step create the angle; do not pull from a stationary stance.

4. Follow their right shoulder toward their back with your right foot. Keep your chest upright and your own arms short.

5. Release the wrist and place your left hand around the waist toward the far hip. Continue behind the hips, then release the triceps.

6. Finish with separate hands resting lightly at the waist. Freeze balanced, release, and switch roles. If their shoulder never clears, return to stance and try a new setup.

COACHING CUES

Wrist first, triceps second. / Elbow across; feet around. / Catch the hip; let the arm go.

Written instruction references:

Daryl Weber • Arm Drag Takedown

USA Wrestling • Folkstyle Level 1: ties, stance, snap and spin

Grindstone • reviewed Arm Drag to Go Behind (B05)

K12 Practice notes

COACH KYLE COLLECTION / Arm Drag

PRACTICE AND ADAPT

Arm drag to hip touch: Give each pair enough space to circle. The receiver follows the pull with a small step and remains standing.

Suggested dose: Three slow repetitions each side, then four attempts each with the receiver allowed one step to square up.

Look for: Gain the angle before taking the hip. A balanced standing finish counts; no takedown is needed.

Ages 4-6: Begin with a gentle coach-assisted upper-arm touch and walk around a stationary partner. Skip forceful pulling and stop at a light hip touch.

Ages 7-10: Use the full cooperative standing sequence. Say one cue for the arm and one for the feet.

Ages 11-14: Let the receiver retract the elbow or square up slowly. Reset a closed angle; link to a separately learned leg attack only after the drag is consistent.

COMMON PROBLEMS

Dragging only the hand. Establish the triceps cup before starting the outside step.

Taking a huge step and ending stretched out. Shorten the first step and bring the second foot around promptly.

Keeping the arm pulled behind the partner after reaching the back. Transfer to hip control and release the arm as soon as it has cleared.

BOUNDARIES AND READINESS

Never grip individual fingers, twist the wrist, or wrench the elbow backward.

This progression stays standing and uses no trips, lifts, or mat returns. Release immediately for joint discomfort or a trapped arm.

VIDEO AND SOURCE NOTES

Mostafa Mohamed - Tiger claws wrestling club #good #wrestling #mma

https://www.youtube.com/shorts/3068BqqXQM8

The supplied clip is labeled Arm Drag but its generic publisher title does not establish exact grips. These steps expand the reviewed B05 standing finish; they are not an exact transcription of the Short.

K13 Arm Drag Drill

COACH KYLE COLLECTION / TEACHING GUIDE

Build smooth wrist-to-triceps control and coordinated outside footwork through an alternating arm-drag practice drill.

Readiness: Athletes can perform K12/B05 slowly and maintain balance as the receiving partner. Both partners know the agreed stop at the hip touch.

Set up: Use pairs of similar size and experience in separate mat lanes. Begin without resistance; each wrestler takes a turn completing one standing arm drag before resetting face-to-face.

TEACH THE MOVEMENT

1. Stand in stance at bent-arm distance. The receiver offers a relaxed, bent right arm; the attacker takes the right wrist with the left hand.

2. Add the right-hand triceps cup above the receiver's elbow. Pause once so the coach can check that the wrist is straight and both elbows are bent.

3. Combine the outside left-foot step with drawing the elbow across toward the attacker's right hip. The receiver steps naturally with the motion.

4. Bring the second foot around, release the wrist, and touch the far hip with the freed hand. Stop while both wrestlers are still standing.

5. Release both contacts before returning face-to-face. The receiver now becomes the attacker; each completes one repetition rather than dragging back against a trapped arm.

6. After accurate turns on the first side, mirror the grips and footwork on the other side. Only then remove the pause and connect the motion.

7. For ready athletes, let the receiver retract the elbow or take one step to square up. The attacker either creates a clean angle or resets; unsuccessful attempts are not rescued with harder pulling.

COACHING CUES

Grip, step, hip. / One smooth action. / Release before switching. / Good position beats speed.

Written instruction references:

Daryl Weber • Arm Drag Takedown

Grindstone • reviewed Arm Drag to Go Behind (B05)

K13 Practice notes

COACH KYLE COLLECTION / Arm Drag Drill

PRACTICE AND ADAPT

Alternating drag ladder: Pairs share one lane. A coach checks one successful repetition per athlete before starting timed work.

Suggested dose: Four turns each on the first side, four on the other; then two 20-second alternating rounds with 20 seconds to rest and receive one correction.

Look for: Keep the wrist neutral, coordinate the first step and drag, and finish every repetition at a stable hip touch. The drill timing is a Grindstone practice suggestion.

Ages 4-6: Use walking footwork around a partner with only a gentle upper-arm guide. Work in short turns with frequent coach resets.

Ages 7-10: Retain the grip-check pause until every athlete can show the two controls. Use cooperative turns rather than speed competition.

Ages 11-14: Progress from predictable turns to the one-step defensive reaction. Finish at the hip touch or connect a separately taught attack on the coach's call.

COMMON PROBLEMS

Racing to accumulate repetitions with no angle. Count only repetitions that finish balanced at the hip; slow the clock if needed.

Pulling against each other during the role change. Require open hands and a face-to-face reset before the next attacker begins.

Practicing only the favorite side. Use a fixed number on each side before the freer reaction round.

BOUNDARIES AND READINESS

The receiver follows with the feet; neither athlete hangs weight from an extended arm.

Keep sufficient room between pairs, and stop immediately if an arm catches behind the body. No uncontrolled mat returns.

The publisher's title identifies arm-pull/drag training. The alternating rounds, standing stop, scoring of repetitions, and age adaptations here are Grindstone's drill structure; the submitted Short's complete sequence has not been verified.

K14 Arm Drag to Cross-Knee Pick

COACH KYLE COLLECTION / TEACHING GUIDE

Connect an arm drag to a knee pick when the partner squares up and takes away the easy go-behind.

Readiness: A controlled arm drag, level change, and knee-pick finish. The athlete must keep the knee aligned and guide a cooperative partner to the mat before adding a live reaction.

Set up: Coach-written arm-drag-to-cross-knee-pick progression. Use the partner's right arm for the drag and their opposite, left knee for the cross-knee target. Start within normal hand-fighting distance, in balanced stances.

TEACH THE MOVEMENT

1. Take the partner's right wrist with your left hand. Guide it down and across just enough to place your right hand behind their right upper arm, above the elbow.

2. Step your left foot outside their right foot and draw their right elbow across your front toward your right hip. Keep your own elbows close and move your feet with the drag.

3. The partner now draws the elbow back and steps to face you. Stay close instead of chasing their back from a stretched position; retain right-hand contact on the upper arm while your left hand releases the wrist.

4. Bend your knees and lower your hips. Step into reach of their opposite left knee, keeping your head up beside the torso; do not fold at the waist and reach from a distance.

5. Cup behind that left knee with your left hand. Use the right-hand upper-arm connection and a short forward step to move their upper body diagonally over the knee you are collecting.

6. Bring the knee toward you only enough to prevent the recovery step while continuing to move your feet. Guide the partner to a controlled hip or side landing; do not twist the knee or drag the captured arm behind their back.

7. Release the upper-arm pull as you follow behind the hips. Settle briefly in controlled top position, release, and reset. If the knee is out of reach, keep stance and restart rather than diving.

COACHING CUES

Drag first; read the square-up. / Feet close before hand low. / Collect the knee, move the body. / Follow the hips.

Written instruction references:

Cary Kolat - Miss Arm Drag, Look for Knee Pick

David Avellan - Arm Drag Defense to Knee Pick

Grindstone - Arm Drag to Go Behind

K14 Practice notes

COACH KYLE COLLECTION / Arm Drag to Cross-Knee Pick

PRACTICE AND ADAPT

Drag, Square, Cross-Knee Pick: The receiver offers a light wrist tie, then squares up after the arm drag. Work the named left-knee target at cooperative speed before mirroring.

Suggested dose: Three slow repetitions each side, then two 20-second turns in which the receiver either gives the back or squares up; reset after each controlled finish.

Look for: Choose a go-behind if the back opens and the cross-knee pick only when the partner squares and the knee is within balanced reach.

Ages 4-6: Teach wrist-and-upper-arm hand placement and a standing walk-around. Use a touch to the opposite knee as a separate game; omit the combined takedown.

Ages 7-10: Link the drag to a knee touch first. Add the guided finish only after both component skills are reliable.

Ages 11-14: Use the two-choice reaction drill and then light positional resistance. Stop the round after a clean finish or loss of good position.

COMMON PROBLEMS

Athlete drops immediately for a knee before the drag makes the partner react. Have the receiver clearly square up on the first few repetitions, then let the attacker choose the knee pick only after that response.

A long reach pulls the attacker's chest over the floor. Freeze after the level change. Bring the feet closer until the knee can be touched while the back stays aligned.

The knee is pulled sideways while the partner's foot stays planted. Reset and move the partner's upper body together with the knee collection; use a cooperative hip landing before adding resistance.

BOUNDARIES AND READINESS

Keep upper-arm contact above the elbow; do not wrench the wrist or pull a trapped arm behind the back.

Move the torso and collected leg together; no sideways knee torque or diving across a planted leg.

The receiver must lower under control and keep the landing area clear.

VIDEO AND SOURCE NOTES

JJ Howland - They NEVER see it coming

https://www.youtube.com/shorts/vpH8fIQ_d7w

The submitted JJ Howland video was labeled Arm Drag to Cross-Knee Pick in Coach Kyle's list, but its public title does not establish the exact grip sequence. The steps are a named standard reaction progression supported by arm-drag-to-knee-pick instruction, not an exact transcript of that Short.

K15 Head Position & Shot Defense

COACH KYLE COLLECTION / TEACHING GUIDE

Keep an opponent from reaching the legs by matching their level, keeping sound head position, and using the hands before a sprawl becomes necessary. The primary lesson is shot defense from neutral.

Readiness: The wrestler can hold a balanced stance, lower the body through the knees, and step backward or sideways without crossing the feet. Begin with a partner's slow level change rather than a full-speed shot.

Set up: Both partners face each other in stance about an arm's length apart. The defender keeps the lead hand low enough to protect the lead leg, the other hand ready for contact, elbows near the ribs, and the head aligned with the torso. The attacker will first reach slowly toward a leg without completing a takedown.

TEACH THE MOVEMENT

1. Set the stance with bent knees and feet wide enough to move. Look ahead from a neutral neck position. Keep the hips underneath you instead of folding forward at the waist.

2. When the partner lowers their level, lower yours through the knees and move your feet to remain in front of the attack. Keep your head position between the incoming attack and your hips; do not launch the head into the partner.

3. Use the lead hand to meet the approaching shoulder or upper arm while the other hand stays ready to help. Keep the elbows bent so the hands can redirect the attack without pulling you forward.

4. Take a short retreating or circling step as you guide the shoulder line away from the lead leg. Keep the feet separated and continue facing the attacker rather than turning your back.

5. If the attacker gets past the hands and reaches the legs, send the feet back into the sprawl already taught by the coach. Let the hips provide the next layer of defense instead of driving your head down onto the attacker.

6. When the shot is stopped, recover a balanced stance with hands ready. With a coach-approved opening, continue to a controlled go-behind or reattack; the defender should not relax immediately after the first block.

7. Reset the distance and repeat with the partner choosing either a level change only or a slow reach. Reward staying balanced and recognizing the attack, not how hard the defender makes contact.

COACHING CUES

Match the level. / Eyes forward; neck long. / Hands ready, feet moving. / Stop the shot, then reset or score.

Written instruction references:

Cary Kolat - Head, hands, and hips defense in clinic notes

John Smith - Defense from the Feet

USA Wrestling - Core Curriculum, lines of defense

Coach Kyle's selected clip - Head-position shot defense, Rhino Wrestling NJ

K15 Practice notes

COACH KYLE COLLECTION / Head Position & Shot Defense

PRACTICE AND ADAPT

Mirror, block, recover: Partners work in a small clear lane. The attacker alternates a level change with a slow touch attempt toward the lead leg; the defender mirrors, blocks at the shoulder or arm, and recovers.

Suggested dose: Three 20-second turns each, with a short coach correction between turns. Add a sprawl only after the moving block stays controlled.

Look for: Stay balanced, protect the legs, and finish ready for the next action without head impact.

Ages 4-6: Use a no-contact mirror game: copy the coach's high and low stance, move the feet, and show hands ready. Add soft shoulder-touch blocks only when both children understand the task.

Ages 7-10: Use slow, predictable reaches before allowing the attacker to choose a side. Connect a missed block to the familiar sprawl and stance reset.

Ages 11-14: Add level-change fakes, second attacks, and a controlled reattack after the block. Keep the same posture and contact standards as speed increases.

COMMON PROBLEMS

The wrestler hears 'use your head' and ducks or lunges crown-first. Use head position as a barrier while moving the whole stance. Rehearse without contact until the neck stays aligned.

Both hands reach far forward and the feet stop. Shorten the reach, keep the elbows bent, and move the feet with the block.

The defender straightens up after stopping the first attempt. Finish each repetition in stance and expect a second attack.

BOUNDARIES AND READINESS

Head position never means headbutting, striking, or meeting the shot with the crown of the head.

Redirect at the shoulder or upper arm without striking the face, throat, or neck.

The original submitted cue, 'Head up, butt down,' may help describe some failed-shot recovery positions, but this drill teaches the defender's neutral position. Do not treat the clip as verified instruction for the attacking wrestler's recovery.

VIDEO AND SOURCE NOTES

Rhino Wrestling NJ - Wrestlers, please block with your head before you get taken down.

https://www.youtube.com/shorts/viX_aTJG3a8

The standard head-and-hands defense progression matches the selected clip's published subject. The original submission called it failed-shot recovery; that different teaching focus is not verified by the title. Playback and a transcript were not reviewed.

K16 Bottom Positioning

COACH KYLE COLLECTION / TEACHING GUIDE

Build a bottom position that can carry pressure, protect the arms, and support the next escape instead of staying stretched out on the belly.

Readiness: Comfort on hands and knees, a safe belly-to-base movement, and a partner who can follow without squeezing or pulling. No leg rides or turns during the learning drill.

Set up: Standard bottom base and belly-to-base progression. Begin with the bottom wrestler on hands and knees; a cooperative rider stays on the bottom wrestler's left, using a loose waist hand and a second hand on the upper back.

TEACH THE MOVEMENT

1. Place the palms under the shoulders and knees beneath the hips, with enough width to balance. Keep elbows soft, neck aligned, and eyes toward the mat ahead rather than tucked under the chest.

2. Keep the belly clear of the mat, hips over the knees, and elbows near the ribs. The rider applies only enough forward pressure for the bottom wrestler to feel the direction.

3. Make small hand and knee adjustments to keep the hips underneath you. Push back into the rider's contact through a strong base without throwing the head backward or reaching behind.

4. For the recovery repetition, start on the belly with the rider following lightly. Bring the elbows beside the ribs and the forearms beside the chest; keep the face clear of the mat.

5. Slide the right knee, away from the rider, forward beside the hip. Press through the forearms and bring the hips back over that knee while keeping the chest low enough to avoid being tipped sideways.

6. Bring the left knee under the hips as the belly rises, then replace the forearms with palms under the shoulders. Keep the elbows bent until the base is stable.

7. Hold the rebuilt base for two seconds. Only then begin a separately learned stand-up or other escape; reset immediately if the arms become trapped or the partner adds an unfamiliar turn.

COACHING CUES

Hands under shoulders; knees under hips. / Elbows home. / Knee in, hips back. / Build first, escape next.

Written instruction references:

USA Wrestling - Folkstyle Level 1 (foundations)

Grindstone - Belly to Base

Grindstone - Inside-Leg Stand-Up

K16 Practice notes

COACH KYLE COLLECTION / Bottom Positioning

PRACTICE AND ADAPT

Build the Base: Top stays to one side with separate hands, no tight grip and no turn. Bottom alternates a balanced starting base and a belly-down recovery.

Suggested dose: Three cooperative recoveries each side, then four 15-second turns with 15 seconds to switch. Top supplies light forward pressure only.

Look for: Recover hands under shoulders and knees under hips, then stay balanced for two seconds without reaching back.

Ages 4-6: Begin solo: belly, elbows in, one knee, second knee, hands. Add only a gentle palm on the upper back when they can repeat the sequence.

Ages 7-10: Use the full cooperative recovery and connect it to a known stand-up after the two-second balance check.

Ages 11-14: Vary light forward and side pressure, then begin short escape rounds. Do not let the drill become a turn or leg-ride contest.

COMMON PROBLEMS

The athlete posts locked arms far in front and leaves the hips behind. Move the hands back under the shoulders and slide a knee beneath the hip before trying to lift the chest.

The athlete reaches back for the rider and loses the front support. Keep the forearms near the ribs and rebuild with the legs. Add hand control only after the base is secure.

A belly-down wrestler tries a push-up while both legs remain stretched back. Bring the outside knee forward first, then move the hips over it and add the second knee.

BOUNDARIES AND READINESS

Do not use locked straight elbows to absorb a falling partner.

Rider keeps hands separate and arms free for the recovery; no chop, head pressure, leg ride, or cradle in this drill.

Keep the face and neck clear of the mat and stop if a hand or arm is trapped.

VIDEO AND SOURCE NOTES

WrestleTownUSA - Wrestling Secrets from Iowa Wrestling Legend Terry Brands #iowawrestling #wrestlingtechniques

https://www.youtube.com/shorts/fiZF0esEwcE

These steps teach the library's standard bottom-base and recovery foundation. The submitted WrestleTownUSA clip features Terry Brands, but its public title does not establish a specific complete sequence; this guide does not attribute these exact steps to him.

K17 Cradle Defense

COACH KYLE COLLECTION / TEACHING GUIDE

Prevent an early near-side cradle by separating the head from the near knee and controlling the reaching hand before the top wrestler joins their hands.

Readiness: Bottom base, whole-hand wrist control, and a partner who immediately releases on a stop signal. This is before-the-lock prevention, not an escape from a secured cradle.

Set up: Bottom is on hands and knees. Top is on bottom's left and makes a loose near-side cradle reach around the head and toward the left knee, keeping the hands apart.

TEACH THE MOVEMENT

1. Recognize the two reaching arms before they connect: one near the head and one approaching the same-side knee. Keep the eyes forward enough to avoid curling the head toward that knee.

2. Send the left foot backward and lower the left hip toward the mat. Keep the right knee bent under you for support; do not turn the trapped-side knee sideways against the mat.

3. At the same time, catch the head-side reaching hand in front of your chest with both hands around the whole hand and wrist. Keep your elbows close; do not peel individual fingers.

4. Keep the left leg long and the left hip low so the head and knee remain separated. Pull the captured hand only far enough away from the knee-side hand to deny the connection.

5. Raise the head and chest through the loose head-side wrap while maintaining hand control. The top wrestler follows without squeezing the neck or trying to force the lock.

6. Once both the head and knee are free, post one hand, slide the left knee under the hips, and rebuild the base. Release the wrist, reset, and practice the other side.

7. If the top wrestler's hands connect at any point, call stop. The top wrestler opens the grip and both reset; do not continue this prevention drill as a locked-cradle escape.

COACHING CUES

Keep head and knee apart. / Leg long, hip low. / Catch the whole hand. / Head free before knee returns.

Written instruction references:

Grindstone - Early Cradle Defense

Grindstone - Cradle Defense Decision

USA Wrestling - Folkstyle Level 1 (foundations)

K17 Practice notes

COACH KYLE COLLECTION / Cradle Defense

PRACTICE AND ADAPT

Stop the Cradle Before It Locks: Top makes one light, predictable cradle reach from the left; hands must remain open. Bottom separates head and knee and controls the reaching hand.

Suggested dose: Three slow repetitions per side, then four 15-second turns with 30 seconds to change roles and reset. One reach at a time.

Look for: Keep the hands from joining, clear the head, and return to a stable base without neck pressure.

Ages 4-6: Practice the solo leg-long/hip-low movement and whole-hand catching with a coach. Do not wrap the head or lock a cradle.

Ages 7-10: Use the predictable, before-lock partner reach and stop after the head clears.

Ages 11-14: Let the rider choose either side at light speed. Add a separately coached locked-cradle defense only after its exact position and release rules are established.

COMMON PROBLEMS

The athlete kicks backward while keeping the hips high and head curled toward the knee. Slow the repetition and lower the threatened-side hip while lengthening that leg and keeping the neck aligned.

The knee comes back under before the head clears, allowing a second cradle reach. Pause with the leg long until the head is visibly free, then rebuild the base.

The athlete fights individual fingers after the hands connect. Stop and release. Rehearse recognizing the reach earlier and catching the whole reaching hand before the lock.

BOUNDARIES AND READINESS

This progression ends when the hands connect; never wrench or bridge the neck to force a locked cradle apart.

Keep the threatened knee and foot aligned; do not rotate across a trapped lower leg.

Use whole-hand control and release immediately on a stop signal; no finger peeling or forceful head pull.

VIDEO AND SOURCE NOTES

Iron Faith Wrestling - Never Get Pinned Again #ironfaith #wrestling

https://www.youtube.com/shorts/Eu-pZ72VwYk

This is the audited before-the-lock near-side cradle prevention from the main move library. The submitted Iron Faith video’s broad title does not establish its exact cradle type or stage, so these steps should not be mistaken for a complete defense against every locked cradle.

K18 Stand-Up to Peterson

COACH KYLE COLLECTION / TEACHING GUIDE

Add an advanced reversal option when a stand-up leaves the wrestler controlled from behind. The Peterson combines wrist control and a leg wrap with a directed shoulder roll; it is not a backward fall or a roll attempted from every rear hold.

Readiness: Use only after the athlete can stand up with hand control, perform a smooth shoulder roll, and cooperate in a slow reversal drill. A coach must demonstrate the exact side and grips with an experienced partner. Teach the low-position version before connecting it to standing.

Set up: For this right-side example, the defender is standing in a bent-knee stance and the partner is behind and slightly to the defender's right, holding the waist. The defender's left hand controls the partner's wrist across the front of the waist. The defender's right arm is available to wrap the partner's nearest knee. Rehearse from a low crouch before using a complete stand-up.

TEACH THE MOVEMENT

1. First complete the stand-up with the feet underneath you and the partner following behind. If you can clear the hands and face the partner normally, take that escape instead of forcing a roll.

2. When the partner remains behind and moves to your right side, secure the wrist across your waist with your left hand and keep that control close to your ribs. Do not pull on individual fingers or leave your arm extended.

3. Bend your knees and bring your hips down into a stable low position. Your coach checks that the partner is close enough for your right arm to reach the nearest knee without diving or stretching your shoulder.

4. Wrap your right arm over and around that knee, drawing the leg close to your side. Keep the left-hand wrist control. You now have one arm controlling the leg and the other controlling a wrist; pause here during the first repetitions.

5. Turn and roll over your left shoulder, the shoulder opposite the leg-wrapping arm. Let the hips follow the turn across the upper back. Your partner follows the motion without posting a locked arm; neither wrestler should land on the head or use the neck as a pivot.

6. Continue the turn and recover your chest toward the mat, keeping the partner close until you can establish top control. Release or adjust the knee wrap as you cover the hips so the leg is not trapped in an awkward bend. If the roll only creates separation, face the partner in stance instead of reaching backward.

7. Stop in the finish so the coach can check control and both partners' arm positions. Release fully, rebuild the same low setup, and repeat slowly before adding the stand-up again.

COACHING CUES

Wrist close, knee close. / Get low before the roll. / Roll away from the knee-wrapping arm. / Shoulder, hips, then recover control.

Written instruction references:

Ben Askren - Standing Peterson counter variation

Cary Kolat - Level 2 bottom-position progression

Coach Kyle's selected clip - Wrap People, not Gifts, JJ Howland

K18 Practice notes

COACH KYLE COLLECTION / Stand-Up to Peterson

PRACTICE AND ADAPT

Peterson grip checkpoint to slow reversal: A coach places an experienced pair in the low rear-control position. Establish wrist and knee control, identify the rolling shoulder, and confirm a clear landing area before each repetition.

Suggested dose: Two or three slow, coach-observed repetitions, then switch roles. Progress to stand-up plus pause plus reversal only after both partners can follow and finish safely.

Look for: Demonstrate the correct roll direction, protected partner arms, and a controlled top recovery without a neck-loaded fall.

Ages 4-6: Practice the stand-up and solo movement foundations. Do not use a partnered standing Peterson in the pups' regular lesson.

Ages 7-10: For children with established movement skills, a coach may introduce the low grip position and an assisted shoulder-roll progression. Keep the ordinary stand-up and hand clear as the main escape.

Ages 11-14: Use the full combination only for athletes who meet the prerequisites. Add light situational resistance after the coach has checked the partner's response and both athletes' control.

COMMON PROBLEMS

The wrestler falls backward while still upright. Return to the low starting position and rehearse a directed shoulder roll. The movement is not a blind drop with a partner attached.

The athlete rolls toward the arm that wraps the knee. Pause at the grip checkpoint and point to the other shoulder before moving. Mirror the complete setup when changing sides.

The wrestler reaches for a distant knee and loses posture or wrist control. Reset. Use the reversal only when the partner's position supplies the close leg and controllable wrist.

BOUNDARIES AND READINESS

No blind standing drop, dive onto the head, or forceful roll against a fixed arm.

The partner must understand the roll and must not post a straight, locked arm to stop the body weight.

Keep the captured knee comfortably bent, stop for shoulder or knee discomfort, and reset whenever the grips or direction are uncertain.

Use a clear mat area with direct coach supervision; speed follows reliable mechanics.

VIDEO AND SOURCE NOTES

JJ Howland - Wrap People, not Gifts

https://www.youtube.com/shorts/4f-Ds-oe3Qg

This is a coach-written, gradual progression for the standing Peterson family, informed by the published Askren variation and Kolat's skill progression. The linked JJ Howland clip's starting grips and precise finish were not reviewed. A coach must match the demonstrated wrist-and-knee setup before adding resistance.

K19 Roll-Out Foundation

COACH KYLE COLLECTION / TEACHING GUIDE

Create separation from a rider through a controlled lateral shoulder roll and recover to face the opponent. This written lesson teaches the shoulder-roll foundation; it does not ask young wrestlers to spin on a weight-bearing head.

Readiness: The wrestler can roll smoothly across the shoulders on a mat, return to a base, and keep the head clear without a partner. Add partner contact only when the coach has checked the solo roll on both sides.

Set up: Begin on hands and knees. For a left-shoulder example, the partner kneels at the wrestler's left side with only a light waist contact and no locked grip, arm bar, or leg hook. Leave clear mat space to the left. First rehearse exactly the same movement without the partner.

TEACH THE MOVEMENT

1. Build a balanced base with the hands beneath the shoulders and the knees underneath the hips. Keep the elbows available to move and bring the chin gently toward the chest without forcing it down.

2. Lift the knees just enough to move the feet and create space under the body. Adjust the feet and hips for a sideways roll instead of pointing straight ahead into a somersault. During the partner version, keep the rider's pressure light and predictable.

3. Thread your left arm beneath your chest toward your right hip, bending the elbow so the left shoulder can approach the mat. The movement goes under your body; do not plant your forehead or crown to carry the weight.

4. Push from the feet and let the hips travel through the turn as you roll laterally from the left shoulder blade across the upper back toward the right shoulder blade. Keep the legs moving with the hips rather than leaving one foot anchored.

5. As the hips come through, bring your feet or knees underneath you and turn your chest toward the mat. Continue turning to face the partner rather than remaining on your back or offering the back again.

6. If the waist contact has cleared, establish stance with hands ready. If the partner remains attached, rebuild a sound base and hand control; do not assume that completing a roll automatically creates an escape.

7. Reset on hands and knees, then switch sides and roles. When the partner is added, they follow at walking speed and release if an arm, leg, or neck becomes caught.

COACHING CUES

Across the shoulders, not onto the head. / Arm under; hips follow. / Roll sideways, then face. / Clear the hold and rebuild your stance.

Written instruction references:

Hudson Taylor - Granby roll mechanics

Cary Kolat - Bottom-position and rolling progression

Coach Kyle's selected clip - Head-Spin to Roll-Out, Pursuit Wrestling

K19 Practice notes

COACH KYLE COLLECTION / Roll-Out Foundation

PRACTICE AND ADAPT

Shoulder roll to face and stance: Use an open lane. Start with solo rolls; when ready, add a partner's loose waist contact from one side with no hooks or locked arms.

Suggested dose: Three solo rolls each direction, then three slow partner repetitions each for athletes who meet the readiness check.

Look for: Complete a smooth lateral roll, keep weight off the head, and finish facing the partner in a stable base or stance.

Ages 4-6: Use coach-led floor movement and an assisted solo shoulder-roll only when the child is comfortable. Keep partner loading and head-spin work out of the pups' drill.

Ages 7-10: Build a consistent solo roll and face-the-partner finish. Add only loose, cooperative waist contact after the coach checks control.

Ages 11-14: Progress from cooperative contact to a specific riding situation. Teach the athlete to recognize trapped limbs and choose another escape when the roll is unavailable.

COMMON PROBLEMS

The athlete performs a straight forward somersault. Return to the solo drill and establish the lateral shoulder-to-shoulder path before adding a partner.

The head becomes a post and the hips stack over the neck. Stop, lower the starting position, and have the coach rebuild the shoulder-roll path. Do not add speed to solve the problem.

The wrestler pauses flat on the back after rolling. Connect the roll immediately to getting the feet or knees underneath and facing the partner.

BOUNDARIES AND READINESS

Do not use the head or neck as the supporting pivot.

Do not roll through an arm bar, locked shoulder, trapped foot, or tight leg ride in this foundation drill.

Keep the landing lane clear and stop if the athlete loses orientation or feels discomfort.

This is a folkstyle escape progression; back exposure has different consequences under freestyle and Greco-Roman rules.

VIDEO AND SOURCE NOTES

Pursuit Wrestling - HEAD-SPIN to ROLL-OUT

https://www.youtube.com/shorts/XDCzq-s7xLQ

These steps teach the shoulder-roll foundation. The selected video adds a head-supported phase with the rider attached; that advanced sequence is not part of this drill. Rolling alone does not establish an escape.

K20 Cross-Wrist Series

COACH KYLE COLLECTION / TEACHING GUIDE

Use cross-wrist control to break the opponent's base, keep them from rebuilding freely, and create a controlled turn. This foundation links a chop to the cross-wrist ride and a half-nelson option; a series is a set of responses, not one forced finish.

Readiness: The wrestler can start legally from top, use a controlled chop, ride with chest pressure, and perform a basic half nelson. Introduce the cross-wrist grip on a cooperative partner before adding a turn.

Set up: Start on the bottom wrestler's left side in the normal top position: left hand at the near elbow and right arm around the waist. The bottom wrestler has a comfortable hands-and-knees base. Explain that the wrist is a control point, not a joint to bend for pain.

TEACH THE MOVEMENT

1. After the start, move with the bottom wrestler and bring pressure forward through your chest and feet. Keep your hips behind their shoulders so you do not slide over their head.

2. Use your left hand and forearm to guide the near left elbow inward while the waist control keeps the hips close. Break the supporting post with a controlled chop, not a strike to the elbow or a collapse onto the neck.

3. As the near arm folds under the body, use your right hand, coming under the abdomen from the waist, to collect that left wrist. Draw the wrist across the belly toward the opposite hip, keeping the wrist straight and the elbow comfortably bent.

4. Keep the captured wrist close against the hip and stay connected with chest pressure. Follow the opponent's hip movement with your feet rather than pulling the arm farther across whenever they move.

5. Pause to establish the ride: the opponent's post is removed, your own base remains wide enough to follow, and the captured arm is not pinned under an awkward shoulder angle. If the wrist slips, return to the breakdown instead of chasing fingers.

6. For the familiar half-nelson branch, thread your free left arm beneath the near armpit and place the palm at the back of the head. Create the turn by moving your chest and feet around the shoulder line; do not wrench the neck with the hand.

7. Walk the turn slowly as the partner moves onto the side and then the back. Adjust or release the wrist control whenever needed to keep the shoulder comfortable, and settle chest-to-chest with a balanced base. If the half is blocked, keep the ride and choose another coach-taught turn rather than forcing the head.

8. Show a stable finish, release the holds, and return to the base. Drill the breakdown and capture separately before combining the entire sequence or adding other tilts.

COACHING CUES

Break the post; collect the wrist. / Wrist to hip, chest stays connected. / Move your feet with their hips. / Control first; choose the turn.

Written instruction references:

Daryl Weber - Cross Wrist Series

USA Wrestling - Core Curriculum, top position and half nelson

Coach Kyle's selected video - Cross wrist series, Get the Gold Wrestling

K20 Practice notes

COACH KYLE COLLECTION / Cross-Wrist Series

PRACTICE AND ADAPT

Chop, cross-wrist, choose the turn: Partners begin in the top and bottom position. The first set ends at cross-wrist control; the second adds a familiar half-nelson turn with the partner cooperating.

Suggested dose: Three breakdown-and-hold repetitions each, followed by three complete controlled turns. Reverse roles and mirror the side on a later set.

Look for: Maintain a straight wrist and comfortable shoulder while controlling the base and moving into a balanced turn.

Ages 4-6: Practice following the hips and a gentle elbow-and-waist breakdown. A coach may demonstrate wrist control, but avoid prolonged tight rides and multi-step turns.

Ages 7-10: Teach chop, capture, and hold as separate checkpoints. Add the half only if both wrestlers already perform it with control.

Ages 11-14: Add bottom movement and decisions between keeping the ride, reacquiring the wrist, and taking a coach-taught turn. Introduce tilts one at a time with their own grip and landing instruction.

COMMON PROBLEMS

The top wrestler pulls the wrist hard while sitting behind the opponent. Restore forward chest pressure and move the feet. The body position should hold the ride rather than arm strength alone.

The wrist folds or the shoulder becomes trapped during the turn. Stop and adjust or release the grip. Keep the wrist neutral and allow the shoulder to move with the body.

The wrestler rushes straight to a half without controlling the base. Pause after the wrist capture and show a stable ride before beginning the turn.

BOUNDARIES AND READINESS

Control the wrist without twisting it, bending fingers, or pulling an arm behind its comfortable shoulder range.

Use a guided chop and body pressure; no blows to the arm, spine, head, or neck.

Stop a turn if the neck is trapped or the opponent cannot move the shoulder with the body. Never force a blocked half nelson.

A new tilt or arm-bar branch requires its own demonstration; it is not automatically taught by knowing the cross-wrist ride.

VIDEO AND SOURCE NOTES

Get the Gold Wrestling - Cross wrist series

https://www.youtube.com/watch?v=tgAe5jY11-0

This is an original coaching progression for a chop-to-cross-wrist ride with a familiar half-nelson branch. The sources support wrist-to-hip control, forward pressure, and progressive turns. The full selected video's particular branches and order were not reviewed.

K21 Top Defense Against a Tripod

COACH KYLE COLLECTION / TEACHING GUIDE

Keep top control when the bottom wrestler raises the hips, then use a spiral-ride angle to return them to a manageable base. This progression teaches torso and hip control against a hands-supported raised base rather than collapsing a head-supported tripod.

Readiness: The top wrestler can follow the hips, maintain a balanced ride, and apply a basic spiral ride without neck pressure. The bottom wrestler can raise and lower the hips with weight supported by the hands and feet.

Set up: The bottom wrestler starts on hands and knees, then raises the knees into a stable hands-and-feet position. The top wrestler is on the bottom wrestler's left side, behind the arm line, with chest contact over the back and active feet. Rehearse without a breakdown first.

TEACH THE MOVEMENT

1. As the partner raises the hips, move your feet with them and stay behind their arms. Keep your chest connected to the back and your own hips underneath you; do not climb onto the neck or reach over the head.

2. Place your left arm inside the near left arm, using the palm and forearm against the upper arm or shoulder area. Reach your right hand between the legs to the inside of the far right thigh, above the knee, as in B24. Keep both controls broad and away from joints.

3. Use the near upper-arm control to guide the shoulder line forward while the inside-far-thigh control manages the opposite hip. Keep your elbows bent and the contacts close; do not stretch the partner’s arm out or lift the leg high.

4. Walk your feet in a small circle toward the partner's head on the near side. Your chest and hip position travel with the circle so the partner has to move the base instead of simply pushing straight backward against you.

5. Continue the controlled angle until a knee returns to the mat or the partner settles to a hip. Follow the lowering body with your own level change. Do not kick the knee, step on the foot, or drive the head into the mat to force the return.

6. Recover your normal top base behind the shoulders, with waist and arm control. When the partner is stable, move to a familiar breakdown or wrist ride. If they rise all the way to standing, switch to the separately taught controlled mat return rather than dragging the neck down.

7. Release, let the partner rebuild the hands-and-feet position, and repeat. The first goal is staying balanced while following; only then add enough pressure for the return to the mat.

COACHING CUES

Follow the hips; stay behind the arms. / Shoulder and hip controls. / Circle with your feet. / Lower with them; rebuild your ride.

Coach Kyle's selected clip - Tripod counter, Mat Clash Wrestling Corp.

Grindstone • reviewed Spiral Ride Breakdown (B24)

K21 Practice notes

COACH KYLE COLLECTION / Top Defense Against a Tripod

PRACTICE AND ADAPT

Follow the raised base, circle, return: The bottom wrestler slowly raises and lowers the hips on hands and feet. The top wrestler follows with spiral controls; the partner offers no sudden roll or stand-up in the first set.

Suggested dose: Three 15-second follow-only turns each, then three cooperative returns to a knee or hip. Switch roles and repeat.

Look for: Stay behind the arms, maintain a moving base, and regain top position without loading the partner's head or attacking a joint.

Ages 4-6: Use a follow-the-hips game from a low hands-and-knees position. Do not load a child who has placed the head on the mat.

Ages 7-10: Introduce hands-and-feet balance, top movement, and a gentle return separately. Add the spiral controls only after the partner can keep a stable base.

Ages 11-14: Add a bottom wrestler who chooses to return to base or begin a stand-up. The rider must follow the correct control sequence and change techniques when the position changes.

COMMON PROBLEMS

The top wrestler stays on both knees while the bottom wrestler raises the hips. Activate the feet and follow the new level before trying to break the position down.

The rider drives straight ahead and slides toward the head. Move in a small circle and keep the hips behind the shoulder line.

The rider grabs the neck or attacks a knee to make the partner fall. Return to broad upper-arm and thigh control, reduce pressure, and teach the base-moving angle.

BOUNDARIES AND READINESS

This foundation uses a hands-supported base. If the bottom wrestler drops onto the head, stop and rebuild the position before applying pressure.

No knee kicks, toe stomps, high lifts, or forceful neck collapse.

Keep contact above the knee and at the upper arm or shoulder; avoid pulling a fixed limb while circling.

Release and reset if a partner begins an uncontrolled roll or cannot maintain the supporting base.

VIDEO AND SOURCE NOTES

Mat Clash Wrestling Corp. - If they tripod up… make them pay.

https://www.youtube.com/shorts/W4rrLfKohME

The written progression uses a standard spiral-ride foundation against a raised hands-and-feet base. The selected clip's exact counter was not reviewed; its title alone does not verify a particular grip, leg attack, or return.

K22 Simple Breakdown

COACH KYLE COLLECTION / TEACHING GUIDE

Break a cooperative bottom wrestler's base with coordinated forward pressure and an elbow fold, then collect a cross-wrist to maintain useful top control.

Readiness: Correct top and bottom starting positions, a receiver who bends the arm and lowers under control, and separate-hand waist control. Introduce the chop slowly before adding resistance.

Set up: Standard tight-waist chop breakdown to a cross-wrist. Top starts on bottom's left: left hand at the left elbow, right arm around the waist with the hand at the navel. Bottom begins on hands and knees with soft elbows.

TEACH THE MOVEMENT

1. Start only on the coach's signal. Keep the right waist arm snug around the belly with hands separate, and position the chest behind the bottom wrestler's shoulders rather than over the neck.

2. Move the left forearm to the outside of the bottom wrestler's left arm at the elbow. Make a short inward folding motion toward the belly; this is a guided elbow fold, not a blow.

3. At the same moment, drive forward from the toes and bring the rear right knee against the buttocks to move the hips forward. Coordinate the hip movement and elbow fold rather than dragging sideways.

4. The bottom wrestler bends the left elbow and lowers onto the forearms, then the belly. Top follows with the feet and chest so the pressure stays forward instead of sitting back behind the hips.

5. As the base lowers, move the right waist hand across the belly to catch the bottom wrestler's left wrist. Keep the wrist close to the belly and below the chest; the left hand can steady the left upper arm.

6. Follow the hips as bottom makes one small effort to rebuild. Keep the cross-wrist connected without twisting it or pulling the arm behind the back.

7. Hold a controlled position for two seconds, release both hands, and reset. A later tilt or turn is a separate lesson; the success here is the breakdown and stable wrist control.

COACHING CUES

Fold the elbow; drive the hips. / Toes move us forward. / Wrist to belly. / Follow, then settle.

Written instruction references:

USA Wrestling - Folkstyle Level 1 (foundations)

Grindstone - Tight Waist Chop

Daryl Weber - Cross-Wrist Series

K22 Practice notes

COACH KYLE COLLECTION / Simple Breakdown

PRACTICE AND ADAPT

Chop, Catch, Follow: Start in the left-side referee position. Bottom cooperates with the first breakdown, then rebuilds once at low effort while top follows the cross-wrist.

Suggested dose: Three slow breakdowns each side, then two 20-second turns each with 20 seconds between. Reset after one breakdown and rebuild.

Look for: Guide bottom to the forearms and belly without impact, capture the wrist, and follow one controlled rebuild.

Ages 4-6: Teach the starting positions and a cooperative forearm-to-belly lowering. Add only a light waist follow; omit a resisted chop.

Ages 7-10: Use the complete slow breakdown and a brief wrist catch. Add the rebuild only when the receiver reliably bends the elbow.

Ages 11-14: Use light positional resistance and connect to the cross-wrist foundation after the breakdown. Do not rush into a tilt without learning it separately.

COMMON PROBLEMS

Top hits the elbow or pulls against a locked straight arm. Stop. Have the receiver soften the elbow and rehearse the short guided fold before adding any forward pressure.

Top pulls sideways and sits back, so bottom keeps a wide base. Practice the forward step and hip pressure without the arm first, then coordinate the elbow fold with that movement.

Top loses contact after the breakdown while reaching for the wrist. Keep the chest following the upper back and transfer the waist hand to the nearby wrist before settling.

BOUNDARIES AND READINESS

Never strike the elbow or drive weight onto a locked straight arm.

Keep pressure through the upper back and hips, clear of the neck; do not drive the head into the mat.

Hold the wrist in its natural alignment at the belly, not twisted, pulled high, or forced behind the back.

VIDEO AND SOURCE NOTES

Iron Faith Wrestling - The #1 Way to Keep your Opponent Down #ironfaith #wrestling

https://www.youtube.com/shorts/uo7oVb7RtPw

The submitted Iron Faith video is broadly titled as a way to keep an opponent down and does not identify its exact breakdown in the public title. This guide teaches the existing library's named tight-waist chop, followed by the cross-wrist connection described in Daryl Weber's instruction; it is not a transcript of the Short.

V01 Lateral Bear Crawl

FACEBOOK COLLECTION / WRITTEN DRILL

The clip shows sideways travel on hands and feet between cones.

TEACH THE DRILL

1. Mark a short, clear lane. Start with hands below the shoulders and knees hovering only if the athlete can support the position steadily.

2. Take three small steps sideways, alternating hands and feet and keeping the body supported.

3. Freeze with quiet hands and feet. Take three steps back the other way, then lower the knees and rest.

COACHING CUES

Quiet hands and feet. / Three steps, freeze, return.

ADAPT TO READINESS

Ages 4-6: Use this only with steady hand support. Otherwise choose the original upright animal movements in G03.

Ages 7-10: Use short, slow lanes with rest between turns.

Ages 11-14: Change direction on the coach's signal after steady movement is established.

BOUNDARIES

Keep the head off the mat and leave space between athletes. Stop for collapsing support or discomfort. Establish control before adding pace; this is not a race.

SOURCE REFERENCE

LuchaFIT

Related game: G03 Animal Passport. This clip teaches a separate hands-and-feet crawling drill; G03’s original video shows Penguin Walks.

Written drill: Grindstone coaching adaptation. Source clip was spot-checked; a full audiovisual review was not completed.

V02 Lateral Shuffle

FACEBOOK COLLECTION / WRITTEN DRILL

The clip shows partners moving sideways between cones.

TEACH THE DRILL

1. Put two flat markers a short distance apart in each athlete's own lane. Begin in the balanced stance taught by the original guide.

2. Push from the trailing foot, step sideways, and let the other foot follow without crossing or bringing the feet together.

3. Freeze with the feet still separated. Change direction on the coach's signal and reset when balance is lost.

COACHING CUES

Push, step, follow. / Short, balanced steps.

ADAPT TO READINESS

Ages 4-6: Take two slow steps with the coach, then freeze.

Ages 7-10: Mirror a partner for 15-20 seconds in separate lanes, then rest and swap leaders.

Ages 11-14: Let the leader vary direction after both partners can stop under control.

BOUNDARIES

Keep lanes separate and travel under control. Do not cross the feet, chase into another athlete's space, or turn this into a race before balanced stops are reliable.

SOURCE REFERENCE

LuchaFIT

https://www.facebook.com/reel/876018031862882

Related foundations: P02 and B02. The lateral shuffle is a distinct partner drill; G07 offers a related follow-the-coach game.

Written drill: Grindstone coaching adaptation. Source clip was spot-checked; a full audiovisual review was not completed.

V03 Circle Tail Tag

FACEBOOK COLLECTION / WRITTEN DRILL

The clip shows one flag wearer moving low on hands and feet inside a circle while an attacker remains outside.

TEACH THE DRILL

1. Mark a flat circle on the mat; do not use a raised rope. Give the defender one loose flag that comes away easily.

2. Start with both partners standing and walking: one defender inside the circle and one attacker outside.

3. The attacker may take only the loose flag. A flag pull or boundary mistake ends the attempt; stop, return the flag, and reset.

4. After 15-20 seconds, stop and swap roles. Use the low version only after the pair has demonstrated control and has enough clear space.

COACHING CUES

Flag only. / Stay in your space; stop and reset.

ADAPT TO READINESS

Ages 4-6: Use the standing, walking version only.

Ages 7-10: Begin standing. A ready pair may use a controlled hands-and-feet version with a coach watching and enough space.

Ages 11-14: Choose standing or controlled hands-and-feet movement according to readiness; keep the same short turns and contact limits.

BOUNDARIES

No body contact, clothing pulls, diving, tripping, or grabbing limbs. Use a loose flag and flat boundary. Stop if the defender loses hand support or either athlete leaves the assigned space.

SOURCE REFERENCE

Related game: G33 Tail Tag. This entry has its own circle setup and original Facebook clip.

Written drill: Grindstone coaching adaptation. Source clip was spot-checked; a full audiovisual review was not completed.

V04 Reach and Level Change

FACEBOOK COLLECTION / WRITTEN DRILL

A partner reaction drill in which an arm reach signals the other wrestler to lower their head and body. The written coaching adaptation uses a visual hand signal without contact.

TEACH THE DRILL

1. Stand outside a partner's arm reach with enough room to lower and recover in place. Start in the original guide's balanced stance.

2. The leader raises an open hand as a visual signal without reaching toward the partner's head.

3. The athlete bends the knees and lowers the hips, keeping the head aligned with the body.

4. Recover the stance, freeze, and reset. Swap roles after a short turn.

COACHING CUES

Knees bend, hips down. / See the signal; recover your stance.

ADAPT TO READINESS

Ages 4-6: The coach gives the signal and models one slow level change at a time.

Ages 7-10: Use partner turns of 10-15 seconds, keeping the partners outside arm reach.

Ages 11-14: Vary the timing after athletes can lower and recover without losing balance.

BOUNDARIES

This is a noncontact version: no head taps, pushes, or slaps. Lower through the knees and hips rather than ducking only the neck. Keep partners outside arm reach throughout.

SOURCE REFERENCE

Irons Elite wrestling club

https://www.facebook.com/reel/1393392289207809

Written drill: Grindstone coaching adaptation. Source clip was spot-checked; a full audiovisual review was not completed.

V05 Solo Entry Footwork

FACEBOOK COLLECTION / WRITTEN DRILL

Solo entries and footwork practiced around agility-ladder markings. Use the clip to study how the wrestler links an entry with movement and a reset.

TEACH THE DRILL

1. Use the original B03 Penetration Step instructions and readiness checks. Set separate clear lanes; optional flat marks can replace a ladder.

2. Rehearse three slow entries on each side in place before adding travel.

3. Use light knee-to-mat contact, recover the base, and reset in stance after each entry.

4. Only after those repetitions are controlled, move to the next flat mark and repeat the same taught entry.

COACHING CUES

Use the B03 steps. / Light knee contact; recover and reset.

ADAPT TO READINESS

Ages 4-6: Use P04 Level Change and Step only; do not assign the full B03 entry from this clip.

Ages 7-10: Use B03 only after its readiness checks, at a pace that preserves control.

Ages 11-14: Link one controlled entry to a reset or a short movement to the next mark.

BOUNDARIES

Keep lanes separate and marks flat. Avoid hard knee drops or rushing through a ladder. The original B03 steps and boundaries govern this adaptation.
